

## **Cheam Fishing Village & Campground Update**

**We are pleased to announce that a number of campsites are now available for individual camping throughout the 2026 season alongside our existing group bookings and private events.**

**Over the past several months, significant work has been completed throughout the campground to prepare the property for guests. This has included extensive site cleanup, removal of hazardous trees, repairs to damaged water infrastructure, restoration of power services affected by theft and vandalism, and addressing a variety of maintenance and safety priorities across the site.**

**While guests will notice many of these efforts, it is important to recognize that much of the work completed to date has focused on cleanup, restoration, repairs, and preparing the campground for safe operation. We have worked hard to restore the property and prepare it for guests while preserving the natural character and unique setting that make the campground special. Pricing for the 2026 season has been established with the campground's current condition in mind, offering guests an opportunity to enjoy the property.**

**As part of this phased opening, campsites are currently available on a first come, first served basis through July 3. Online reservations are expected to become available shortly thereafter and will provide guests with the option to reserve campsites in advance for the remainder of the season.**

**In addition, as Fraser River water levels continue to recede, we anticipate opening the boat launch for day use once conditions are suitable, providing additional access for anglers and recreational boaters.**

**We look forward to welcoming both returning and first-time guests to Cheam Fishing Village & Campground this season.**
