

Tenant Resilience for Microsoft 365

Anticipate, withstand, and respond to Microsoft 365 tenant attacks. Gain un-paralleled visibility, remove un-necessary privileges, backup configurations, prevent tampering, and rapidly recover your tenant after an incident.

The Challenge: Your Microsoft 365 tenant is exposed

Despite offering amazing tools, there has never been a security challenge like Microsoft 365:

- 55+ interconnected apps & services
- 10,000 configuration settings
- 90+ privileged roles
- 200+ permissions
- Massive attack surface to monitor
- No tenant configuration backup
- No visibility of configuration tampering
- Tenant-wide privileges by default

Without a tenant-wide approach to building resilience, these risks leave your organization hugely exposed to tenant takeover, tenant downtime, and existential breaches.

CoreView Tenant Resilience for Microsoft 365

Gain un-paralleled visibility, remove un-necessary privileges, backup configurations, prevent tampering, and rapidly recover your tenant after an incident.

Why CoreView Configuration Manager for M365:

Harden tenants against attack: CoreView's CIS configuration baseline acts as a "golden image", making it easy to harden your tenant(s) with resilient configuration.

Segment tenants and remove excess privilege: Create virtual tenant "segments" to enforce "just enough" access. Retire over-privileged accounts and minimize admin exposure.

Detect configuration tampering: Dedicated dashboards monitor and alert on tenant configuration changes. See instantly when an unauthorized change occurs and rollback in minutes.

Restore configuration after incidents: Backup critical tenant configuration settings and restore them with a single click in the event of a disaster.

Build operational resilience: Monitor identity risk and security policy enforcement. Use automation workflows to safely delegate administrative tasks at speed and scale.

Configuration Coverage

Entra ID

- User Management
- External Identities
- Password Resets
- Hybrid Identity
- Conditional Access
- Privileged Access
- Authentication
- App Management

Intune

- Device Config
- App Management
- Device Enrollment
- RBAC
- Security Baselines
- Update Management
- Endpoint Analytics
- Compliance

Defender

- Cloud
- XDR
- O365
- Networks
- Endpoint
- Cloud Apps
- Identity
- Malware & Anti-Virus

Purview

- Catalog
- Data Classification
- Sensitivity Labels
- Info Protection
- Data Governance
- Data Lineage
- Data Privacy
- Data Leak Protection

Teams

- Teams & Channels
- Message Policies
- Meetings & Calls
- Teams Voice
- External Access
- Guest Access
- Guest Permissions
- Security & Compliance

SharePoint

- Site Collection
- RBAC
- Documents
- Content Types
- Search & Navigation
- Security & Compliance
- Backup & Recovery
- Integrations & Apps

Exchange

- Admin Audit Log
- Mail Flow
- Accepted Domains
- Calendars
- DKIM signing
- Distribution groups
- Client access rules
- Mailbox Management
