

Rapid Return & Recycling Program: General Overview

Introduction

This exciting new initiative from Tive™—the **Rapid Return & Recycle Program**—is designed to make the process of returning used Tive trackers easier, enabling your company to minimize electronic waste and promote a circular economy within the logistics industry.

This program involves “return kits” that you can use on all your cargo—from shippers to receivers. By returning used trackers for recycling, customers create a closed-loop system that reduces e-waste and conserves resources. **Please note:** this program is currently available in the United States, and is only available for shipments that end in the U.S.

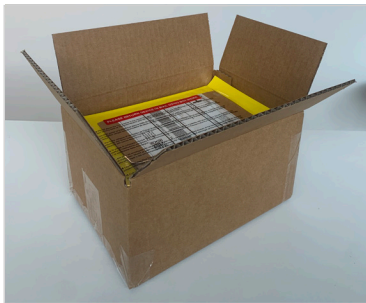

How the Program Works

1

To begin, you simply order a box of return kits. These kits come in boxes of 50, and can be ordered either on the Tive platform or by reaching out to your account executive or account manager (similar to how you currently order trackers).

2

Each return kit includes a clear pallet envelope with a prepaid USPS return box inside it. Your outbound shipping team simply attaches the pallet envelope to the box or pallet, places the Tive tracker inside the envelope, and seals the envelope for shipment.

3

When the shipment arrives at its destination, the receiver removes the tracker, places it in the return box, and seals the box.

4

Once the tracker has been sealed into the return box, the receiver simply places the box into their outgoing USPS mail.
