Fivetran fundamentals

Fivetran services

A guided series of one-on-one technical hands-on training sessions for data-delivery teams to accelerate onboarding onto the Fivetran Platform.

Our sessions are delivered by dedicated Solution Architects, who are Fivetran experts in data integration for the modern data stack. Participants will learn how to apply Fivetran best practices to their organization's data integration & analytics needs quickly with greater success.

Accelerating time to insight
Work with our Solution Architects to accelerate your speed to impact and Return on Investment

Improve data team impact
Technical Subject Matter expert on hand to work through onboarding tasks

Mitigating risk
Ensure data reliability and uptime along with reducing overall data integration solution implementation risk

| Kick–Off | Sessions | Review |
| Week 1 | Weeks 2 | Week 3 |

| Kick–Off & Pre Work | Platform Overview | Destinations & Connectors | Security/Networking & Governance | Cost & Uptime Management | Wrap Up & Review |
| 1 hour | 1 hour | 2 hours | 1 hour | 1 hour | |

We recommend completing onboarding in the first 30 days

If there is a topic that is critical to your onboarding but not in this list, please reach out to your Fivetran representative for more information

What to expect

We will begin with a **kickoff**, to introduce you to your Solution Architect, outline the training pre-work and discuss the training customization options. Next, your Solution Architect will schedule a **platform overview** session, where we'll explain Fivetran's core architecture and walk you through how to efficiently navigate the platform.

With your Solution Architect, you will be guided to select the most relevant **connectors & destinations** best suited to your team's needs. For each data source and destination there will be a step-by-step walkthrough of the setup, configuration nuances and best practices.

The **data governance & security** session will provide you with an understanding of the end-to-end security Fivetran provides and how you can add layers of security and governance to your ELT process. Basic networking will also be covered in this session if relevant to your use case.

The hands-on workshops will conclude with the **cost & uptime management** workshop to ensure you understand how Fivetran pricing scales as your analytics program grows, and how to monitor usage using features such as the Usage Tracking Dashboard and the free Fivetran Log Connector.

After your sessions, we will walk-through a **review**, and provide you with future recommendations and resources to make the most out of your modern data stack.

Key outcomes
✔ An understanding of Fivetran best practices as it relates to your needs
✔ A deeper comprehension of the setup and nuances of specific data sources that your organization is using
✔ An understanding of the security and governance features at each stage of the Fivetran process
✔ Awareness of how best to monitor uptime and manage costs to maximize ROI
✔ Ability to deliver faster project timelines while maintaining long-term success
