Introducing the  
**Whirlwind PLR-MC21 and PLR-MC22,**  
two rock solid additions to the PowerLink® line.

**WHIRLWIND MOTOR CONTROL**  
**Built exactly as you might expect**

Introducing the Whirlwind **PLR-MC21** and **PLR-MC22**, two rock solid additions to the PowerLink® line.

PLR-MC21 and PLR-MC22 are devices for controlling three phase chain motors. Each unit will operate one or two motors in a convenient 2RU package with all controls and connections readily accessible on the front panel. The PLR-MC21 has ten Amp circuit breaker protection and is

designed for use with one ton and smaller motors. The PLR-MC22 has twenty Amp circuit breaker protection and is designed for use with two ton motors. Both units have individual up and down selectors for each motor and a master GO button. A phase reverse circuit is also provided to correct

motor direction. Three phase input connectors can be selected to coordinate with existing power distros and motor connection is through seven pin round type disconnects. Visit us on-line and find out more at: [whirlwindusa.com](http://whirlwindusa.com) and see how Whirlwind is changing an industry.
