

We will start soon...

From Software Developer to Tech Lead: What happens when code is no longer enough?

Camera and microphone

Your camera and microphone are turned off today. But please use the chat and the Q&A

Chat

Remember to press "to everyone" in the chat so that everyone can read what you write.

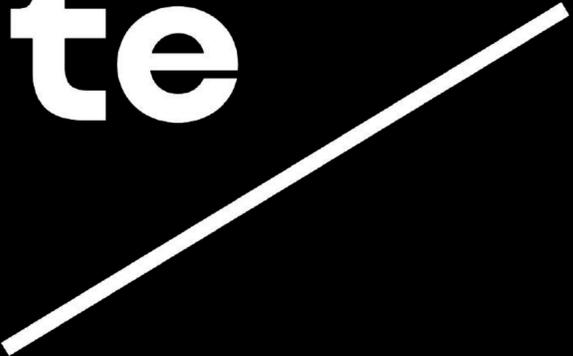

Test the chat by saying hi!

Q&A

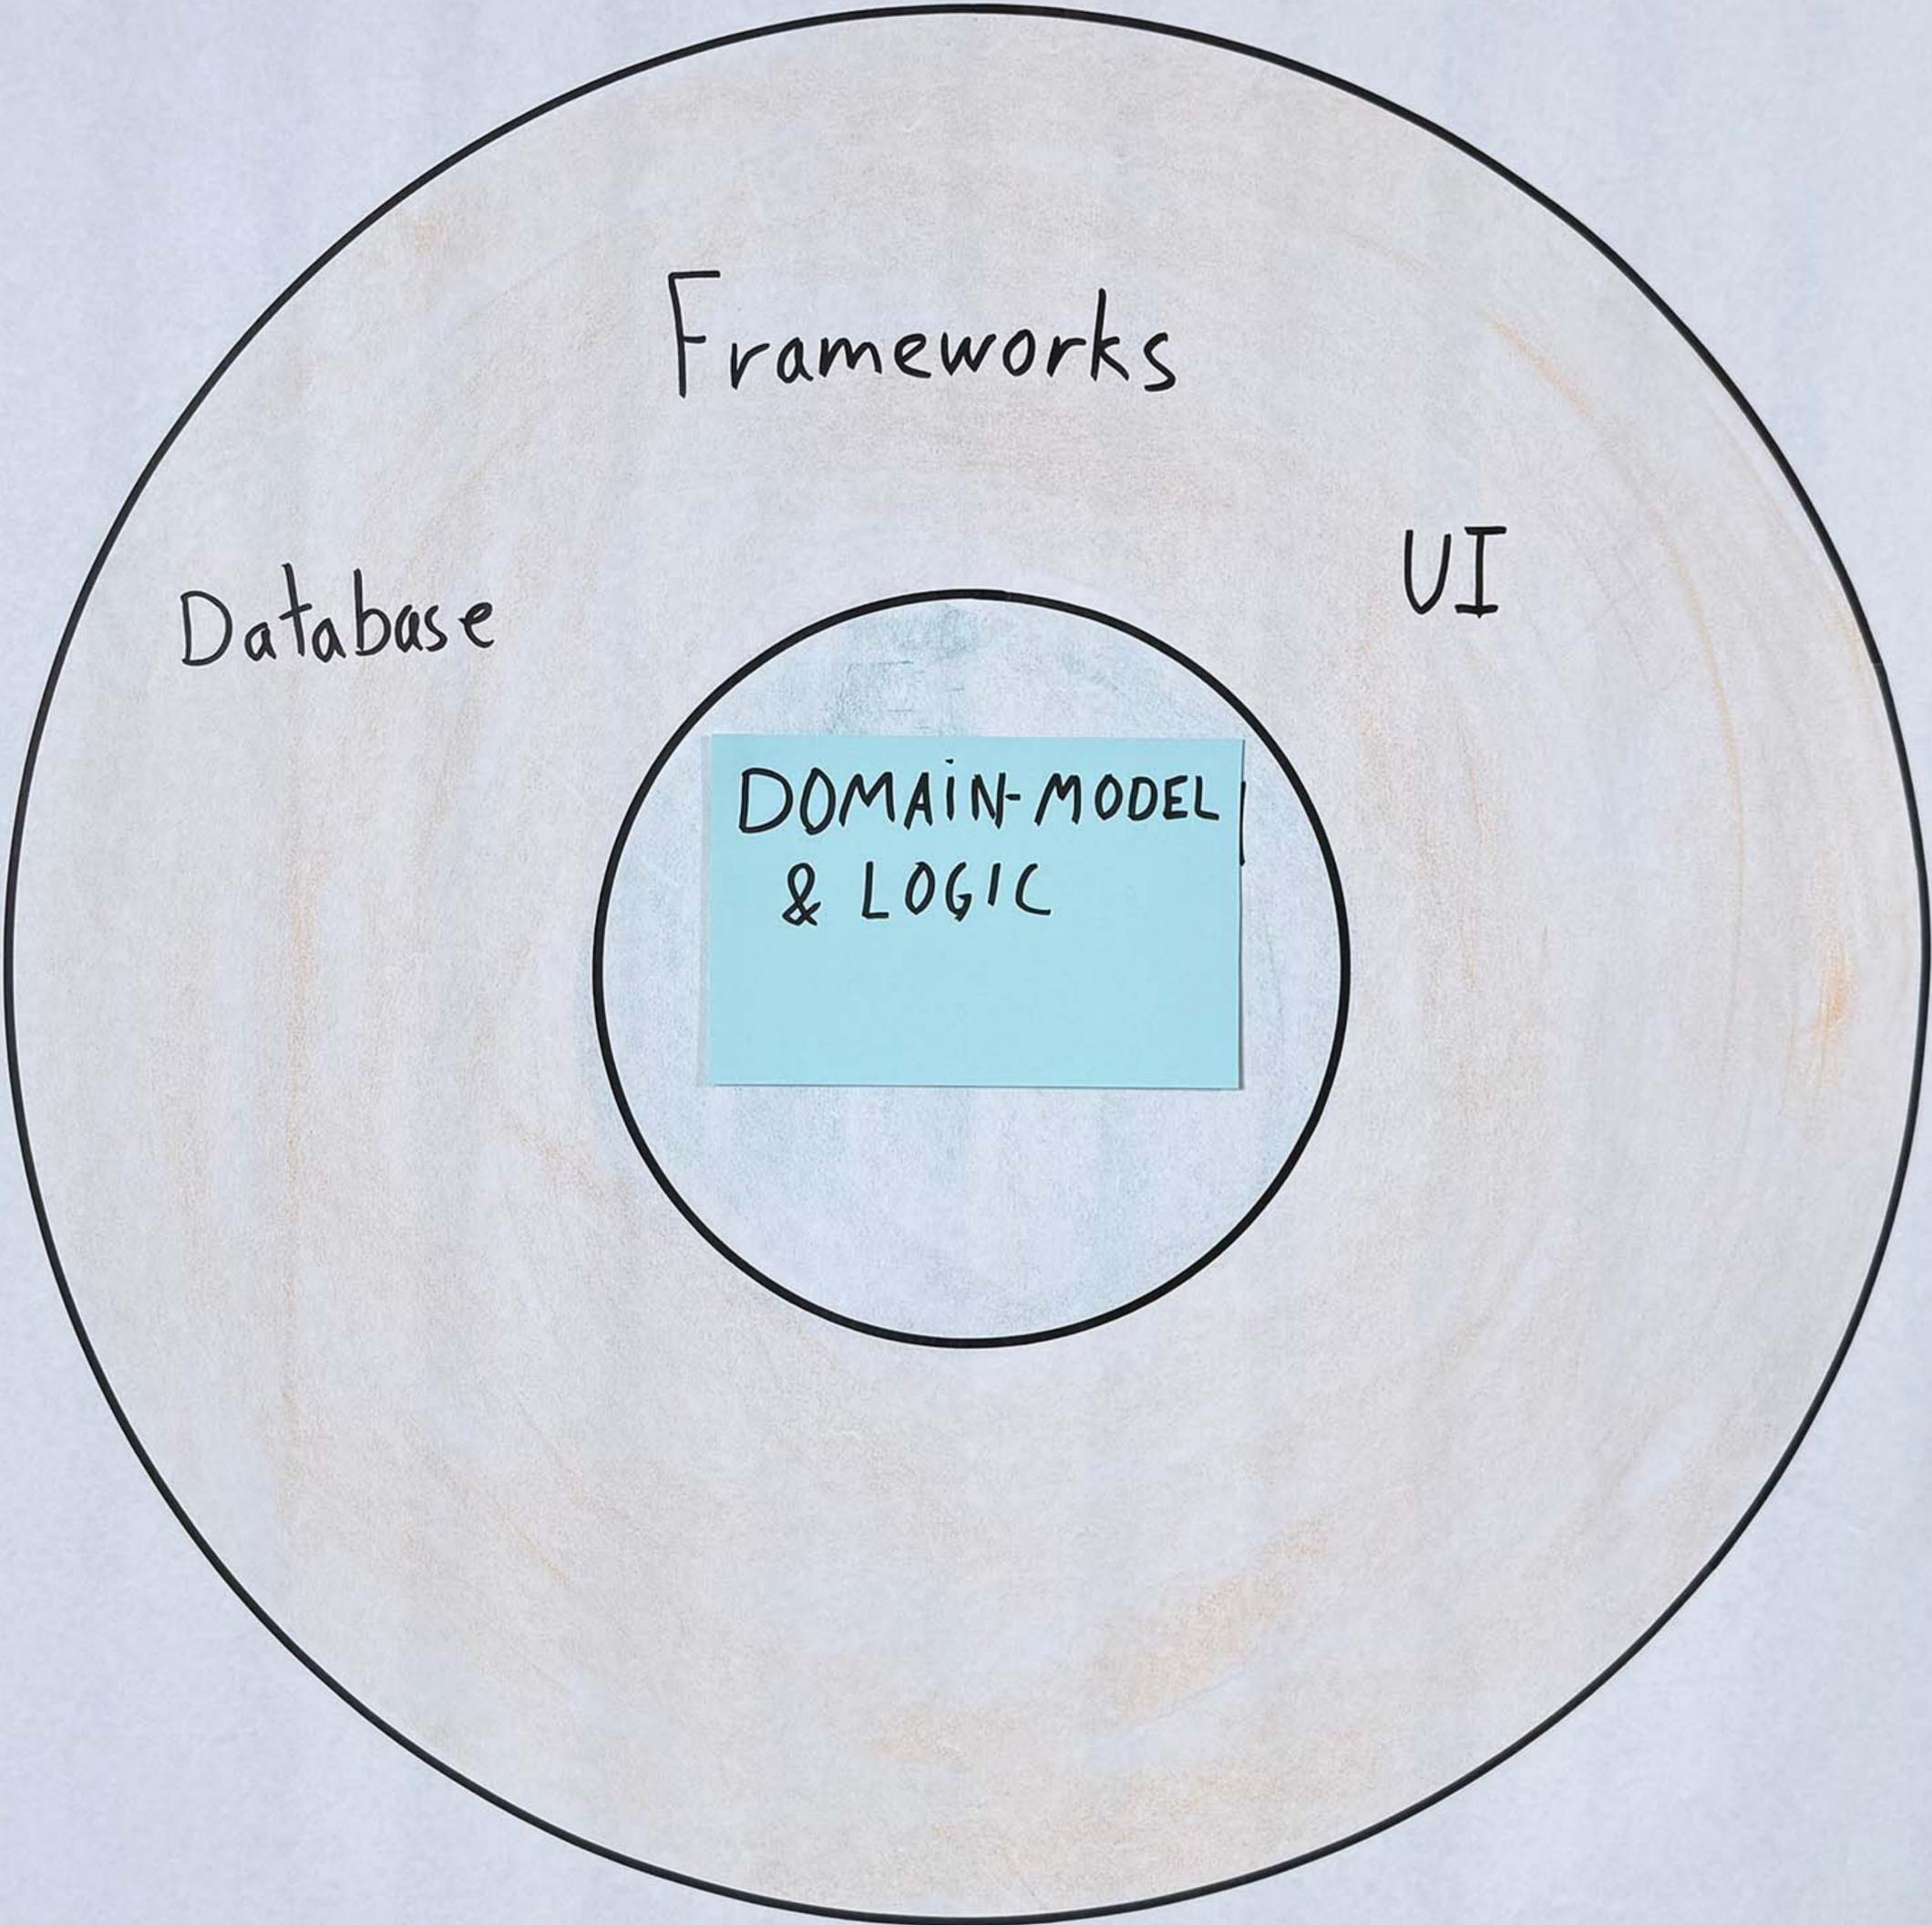

Ask your questions via the Q&A
Stil dine spørgsmål via Q&A knappen. Så følger vi op til sidst i webinarret.

Argh, the compiler is complaining about a cyclic dependency, can you help?

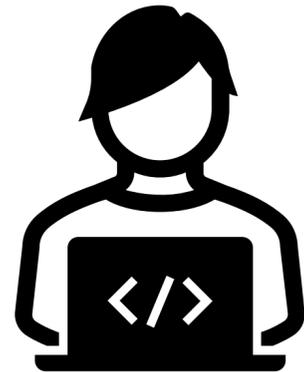

Which branch? I'll try to take a look at it...

Argh, the compiler is complaining about a cyclic dependency, can you help?

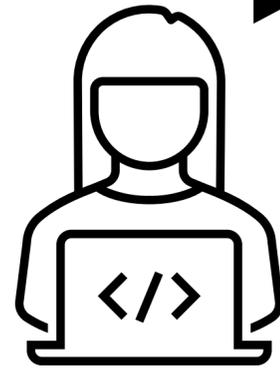

Where exactly in the code does the cyclic dependency occur?

If we zoom out a bit, what does this error tell us about our current architecture?

Should we do this refactoring now, or wait?

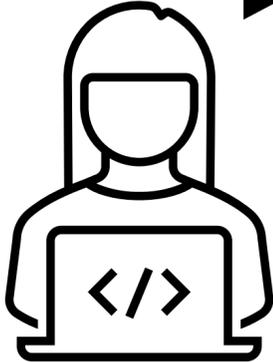

Which branch? I'll try to take a look at it...

Wait until the next release...

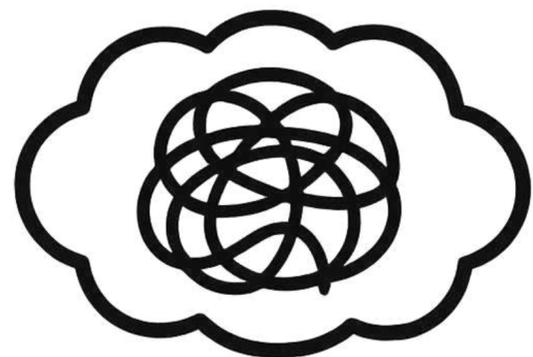

Should we do this refactoring now, or wait?

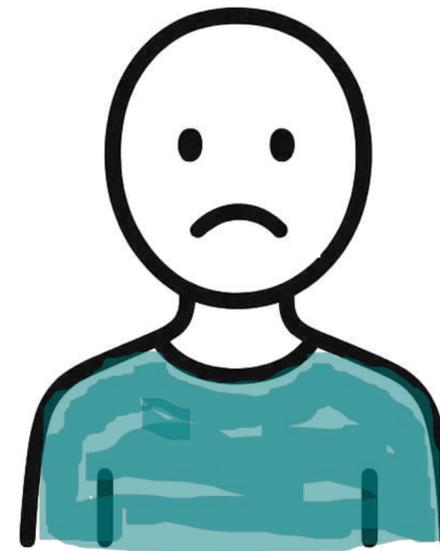

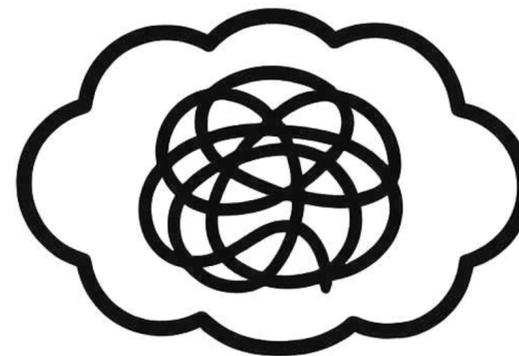

What's the consequence if we don't do it now?

What information are we missing to be able to decide?

If we zoom out a bit, what does this error tell us about our current architecture?

What are you trying to achieve when the modules were coupled?

Argh, the compiler is complaining about a cyclic dependency, can you help?

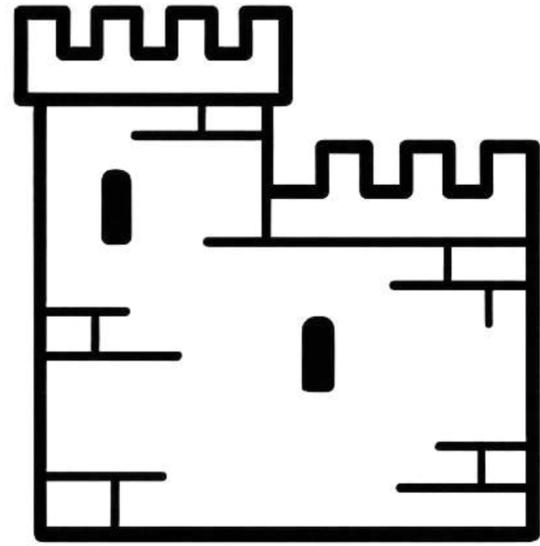

Is this something we've seen before? When was the last time, and why back then?

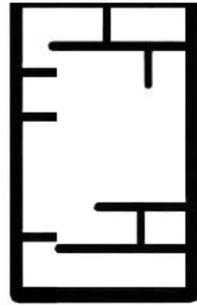

Where exactly in the code does the cyclic dependency occur?
