

SAFEGUARDING DIGITAL TRANSFORMATION & AI INNOVATION

Adoption of digital technologies can transform business processes, open up new opportunities and give an edge in a competitive marketplace. However, digital technologies evolve rapidly, and making smart choices requires deeper understanding and foresight.

BALANCING INNOVATION AND DISRUPTION

Steady innovation and business growth require careful consideration of technologies' lifecycle. Far too often, a technology changes, upgrades and obsolescence have disrupted business operations, innovation and customer facing services. A systematic management of technology lifecycles is key to insuring business continuity, regulatory compliance and optimizing IT resources and services.

Faster we innovate, faster the current technologies become obsolete, affecting business processes and digital assets.

Intact Digital provides an independent assessment of technologies, technology roadmaps and risks of technological obsolescence that can affect strategic projects and digital transformation initiatives.

We serve as a trusted advisor and a long-term companion on digital transformation journeys, ensuring digital continuity and lasting effects of technical innovation.

UNDERSTANDING TECHNOLOGY STRENGTHS AND LIMITATIONS

Traditional software systems are increasingly complemented with new waves of technologies, ranging from cloud storage platforms to software-as-a-service solutions and tools imbued with machine learning and AI technologies. These new technologies have different characteristics and require in-depth analyses and understanding to determine their benefits and drawbacks and long-term impact.

Understanding digital technologies strengths and limitations paves a way for smart decisions and successful innovation strategies.

Intact Digital provides assistance with making technological choices for specific use cases, considering requirements for long-term reliability, reproducibility and regulatory compliance.

OUR APPROACH

We work with Quality Assurance, IT and Operations teams to support technical decisions about optimizing business processes, innovation and compliance. We provide assistance and contribute to

- Solution design
- Procurement and licensing
- Specification of Standard Operating Procedures (SOPs)
- Review and update of existing systems and practices.

As technology experts, we conduct in-depth technical analyses and advise on

- Identifying risks and gaps in technology management
- Devising a strategy to mitigate risks from obsolescence
- Creating an effective risk mitigation plan
- Monitoring implementation activities and validating methods, systems, processes and outcomes.

For organizations that require authenticity, reproducibility and trustworthiness of data analyses, we offer long-term care of the required computing environments and legacy software installations through our Software Library platform and services.

ABOUT INTACT DIGITAL

INTACT DIGITAL LTD is the first and the only company that provides a systematic approach and effective end-to-end solutions to ensure long-term use of software, readability of data and reproducibility of data analyses. We offer installation, validation and hosting of software installations within a secure hosting platform and apply state-of-the-art virtualization and remote access technologies to ensure that the software remains usable for as long as needed.

We work with you on optimal digital continuity strategy, to secure the value of your digital assets and protect your technology investments.

MACHINE LEARNING & AI

We assist with digital transformation challenges, including:

- Data storage platforms and data integrity compliance
- Software-as-a-service and long-term software use
- Quality assessment of AI based technologies and reproducibility requirements for machine learning systems.

Our services complement standard data management and archiving practices by maintaining software installations needed to use dynamic digital data in their original form. We support our customers in complying with regulations on data retention, data integrity and reconstruction of past studies by hosting unsupported software that presents security issues and requires special care.

Intact Digital is a bridge between the technology users and the technology providers, ensuring long-term benefits for both. Our services extend the value of software beyond its market life-time and ensure the use of created digital content, information, and knowledge over long term.
