ABSTRACT SUBMISSION GUIDELINES

Before submitting your abstract, authors should note that all accepted abstracts of the 24th CIMT Annual Meeting will be published in the *Journal for Immunotherapy of Cancer* (*JITC*) following the conference. Published by BMJ Publishing Group Limited, JITC is a peer-reviewed, open access scientific journal and the official journal of the Society for Immunotherapy of Cancer (SITC).

Authors who do **not** wish to have their abstract published in the journal must indicate this during the submission process by selecting the appropriate opt-out checkbox in the abstract submission platform. Their abstract will not be published in the journal but will still be considered for poster presentation at the meeting.

Please note that, as part of the abstract submission process, the submitting author will be required to legally consent to the terms and conditions of BMJ Group's Standard Author Licence for Conference Abstracts and confirm compliance with BMJ Group's policy on AI use in the abstract submission platform.

The Scientific Abstract Committee will evaluate submitted abstracts based on the novelty of the research, significance of the findings, scientific quality of the study, and clarity of presentation. Abstracts must describe original, unpublished work. Authors should clearly state the study objectives and hypotheses, summarize the key results, and highlight the scientific significance of their findings. Abstracts that are poorly written or lack sufficient detail to allow an assessment of their scientific quality may be rejected.

If an abstract is written in a manner that prevents the Scientific Abstract Committee from adequately assessing its novelty, significance, scientific quality, or relevance, it will not be accepted for presentation at the conference. Authors should ensure that their abstracts are clear, concise, and provide sufficient information to allow an informed scientific evaluation.

Authors are solely responsible for the content, accuracy, and integrity of the information presented in their abstracts.

Authors submitting abstracts for presentation must register for the conference before submitting their abstract. For abstract presenters, participation in this conference is mandatory.

Content and Format

a. Please submit your abstract in English. Consistent American or British spelling should be used throughout.
b. The combined length of the abstract title and body should not exceed 3,000 characters (including spaces). The online submission system will not accept abstracts that exceed this limit. The author and institution list is not included in the character limit.
c. Sentence-style capitalization for the title should be followed: only the first word and proper nouns are capitalized e.g. The role of the tumor microenvironment in …
d. Titles should be indicative of the content of the abstract. All words necessary to identify the subject matter should be included in the title to facilitate electronic retrieval (if applicable). Avoid non-standard abbreviations in abstract titles.
e. Abstracts must describe in a succinct manner the purposes and results of the research so that the quality, novelty, and comprehensiveness of the work can be evaluated by the Scientific Abstract Committee. The abstract content should be structured as follows: abstract title; author names (first name(s) and last name(s); full names are preferred because if initials are used this can cause confusion where authors have common last names); author affiliations (including country of each author; should be indicated by superscript numbers (e.g. "F Moran[1], J Bradley[2]…[1]University of Ulster, N. Ireland; [2]Belfast City Hospital,...N. Ireland"), and content. The abstract shall contain: (a) an introductory sentence indicating the purposes of the study; (b) a brief description of pertinent experimental procedures; (c) a summary of the data; and (d) a statement of the conclusions. These should be provided as a single paragraph without any subheading.
f. Please refrain from formatting your abstracts. We cannot guarantee that abstracts will be formatted in the exact way as they are entered.
g. Abbreviations may be used in the body of an abstract if they are defined at their first mention in the text. Complex therapeutic regimens must be identified.
h. No citation, figure, table, or any type of illustration should be added to the abstract.
i. When biological or chemical data pertaining to chemical entities are an integral part of the research, the chemical structure, method of preparation, and patent or reference numbers must be presented. If for any reason this information cannot be provided when the poster is presented at the conference, the abstract on this work should not be submitted for consideration.
j. Because of administrative and time constraints, supplemental data cannot be considered by the Scientific Planning Committee.
