ROMBUS PAVEMENT

ROMBUS GRID

INNOVATIVE CONCRETE PAVEMENT TECHNOLOGY

Rombus is the new innovative hybrid, ridged / flexible concrete pavement technology. This new technology is the first of its kind. Rombus is a game changer in the concrete pavement and concrete slab industry. It's unique design and engineering composition makes it ideal for high traffic areas. The recycled plastic grid system is sustainable and eco-friendly.

The installation process is straight forward, simple and fast. The Rombus grid can be installed over an existing surface or a prepared base course layer. Once installed, the system is very durable and has low maintenance properties, reducing long term costs and ensuring the longevity of the wearing surface.

Rombus offers a wide range of benefits over traditional concrete slab and pavement systems. No formwork is required. No reinforcing mesh is required and no pumping cost because the concrete trucks can drive directly on the Rombus grid. No saw cuts are required, also there are fewer expansion joints that are required, so the savings to the slab and construction can be considerable. Creating a cleaner greener future with the concrete industry by introducing a revolutionary rapid deployment recycled plastic grid system that's stronger, faster, cheaper and greener than traditional methods.

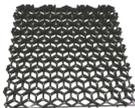

KEY FEATURES

- No Formwork cost
- No Reinforcing cost
- No pumping cost
- No sawcutting cost
- Stronger, Faster, Cheaper, Greener

APPLICATIONS

- Industrial
- Concrete Construction
- Recycling
- Farming & Agriculture
- Landscaping & Domestic Applications
- Retail Centres

PRODUCT	CODE	DESCRIPTION	UNIT
	96 580	Rombus Grid 1000mm x 1000mm x 40mm	Each
	96 581	Rombus Angle Edge Extrusion 2.2m Length - Right Angle	Length
	96 582	Rombus Edge Strip 2.2m Length	Length
