## DENSIFIERS & SEALERS

# SINAK QS-90

SINGLE COMPONENT HYBRID SEALER FOR LONG TERM, MULTI-SURFACE PROTECTION

Sinak QS-90 is a spray-applied, clear, single-component, water-based hybrid sealer designed to shield new and existing interior and exterior, vertical and horizontal substrates from water penetration, surface wear and environmental degradation. As a hybrid system, QS-90 provides a durable, UV Stable, non-yellowing barrier that enhances appearance, performance and longevity on a wide variety of surfaces and substrates, including (but not limited to) concrete, pavers, terazzo, gypsum, brick, natural stone, masonry, asphalt, metal, wood, underlayments, epoxy, decorative substrates, coatings, flooring and roofing systems.

When applied, QS-90 penetrates the upper pore structure of cementitious and porous materials, forming a hydrophobic network that limits moisture absorption and surface contamination. It forms a clear, breathable film on the surface providing a lasting, non-yellowing shield that resists abrasion, staining and chemical attack. QS-90 can be burnished to achieve a high-gloss finish, serving as a durable polish guard that enhances gloss and ease of maintenance.

QS-90 is engineered for simplicity, performance and sustainability. Its formulation is completely free of solvents, APEO, benzophenone, formaldehyde, PFAS and toxic additives supporting superior indoor quality and long term environmental health while providing exceptional resistance to a chemical intrusion - including acids, alkalis, salts, fuels, oils and other aggressive industrial agents. QS-90 also prevents staining and biological growth, resisting algae, mold, mildew and efflorescence even in high-humidity or coastal conditions. This combination of green chemistry, indoor environmental health and industrial grade durability makes QS-90 ideal for use in environmentally sensitive, occupied or enclosed spaces where low VOC and non-hazardous materials are required.

QS-90 bonds tightly to any properly prepared surface - cementitious, non cementitious, coated or composite - making it one of the most universally compatible sealers available. It adheres tenaciously to metal, wood, epoxy and other resinous systems, enhancing gloss, durability, UV resistance while protecting oxidation, chalking and environmental wear.

### KEY FEATURES

- Comprehensive surface protection
- Multi-surface compatibility
- High performance durability
- UV Stable and Non-Yellowing
- Environmentally responsible chemistry
- Fast drying, single component application
- Extends surface life
- Compatible with decorative and resinous systems

### APPLICATIONS

- Hybrid sealer for interior and exterior concrete
- Vertical and horizontal substrates
- Exposed aggregate concrete
- Coloured concrete
- Pavers, brick, natural stone and more

See product label or product information sheets for complete application instructions and precautions.
