

Students don't just learn about entrepreneurship. They build something real.

Co-AI Young Founder is a structured innovation program for for 5th–12th grade students. Each student starts with a **real problem** in their community and works step by step toward a fully developed idea for positive change. Guided by **responsible AI** capabilities, students think critically, communicate clearly, and take ownership of solutions that could make a **real difference**.

WHAT THEY DO

- Spot a real problem in their community
- Research who is affected and why
- Design a solution for social impact
- Build and deliver a pitch for change

WHAT THEY CREATE

- A validated community problem statement
- A digital prototype such as a mobile app or blueprint
- A pitch deck — structured slides they create
- A pitch presentation they have practiced and own

WHAT THEY TAKE AWAY

- Confidence in finishing something meaningful
- A changemaker mindset they can build on
- Stronger communication — written and verbal
- Habits of initiative and follow-through

HOW IT WORKS

1

Choose a Problem

Students identify a real issue in their school, home, or community that they want to solve.

2

Test the Idea

They research who is affected and whether a solution already exists.

3

Design the Change

Students design their solution, define who it serves, and how it creates real impact.

4

Pitch It

Each student delivers a structured, practiced pitch — clear and entirely their own.
