

Prepare your Bitcoin wire purchase.

Six stages to review alongside the approved instructions for your current request.

☐ 1. Account and review

Complete the identity, account, wallet and other checks requested for this purchase. Joint and business accounts require verification of ownership and authority.

☐ 2. Bank and timing

Check your bank's outgoing limit, fee and cutoff. Bank processing and required reviews affect timing. Sending the wire does not lock the Bitcoin price.

☐ 3. Current instructions

Use the approved beneficiary, bank details and exact payment reference for this request. Verify unexpected changes through an independently reached official channel.

☐ 4. Your receiving wallet

Confirm BTC, the supported network and the complete receiving address you control. Verify on your hardware device when applicable. Never share wallet secrets.

☐ 5. Price and costs

Review the final quote after funds arrive. Our service fee is 8% below \$100,000 or 5% at \$100,000 or more, deducted from the wire. Bank charges are separate; review any other costs.

☐ 6. Records and delivery

Keep the bank receipt, approved quote, purchase confirmation and Bitcoin TXID when available. A bank reference and a TXID track different stages.

Marking these boxes is not approval to send funds. Use your secure request for payment details. Before funding, ask about cancellation, return charges and processing time. This PDF contains no bank instructions.
