

Compare Bitcoin purchase offers.

Record the same asset, intended destination and similar quote time. Keep this sheet private.

	Offer A	Offer B
Provider / operator		
Official website		
Quote time and expiry		
Purchase payment (\$)		
Separate charges (\$)		
Total dollars paid (\$)		
Final BTC received		
Destination / custody		
Timing / withdrawal holds		
Official support channel		

Count included fees once. Total paid = purchase payment + separate charges. Effective cost per BTC = total dollars paid / final BTC received. A lower figure does not establish provider reliability or suitability.

Do not enter bank account numbers, passwords, recovery words or private keys. Resolve unanswered eligibility, custody, cancellation and support questions before paying.

See how the comparison works.

Hypothetical examples only. Not live prices, competitor quotes or an investment recommendation.

Assume both offers deliver Bitcoin to the same external wallet at a similar quote time. Provider charges are already included in the purchase payment. Additional delivery deductions, if any, must be reflected in final BTC received.

Comparison	Example A	Example B
Purchase payment	\$10,000	\$10,000
Separate bank charge	\$25	\$0
Total dollars paid	\$10,025	\$10,000
Final BTC received	0.09200000 BTC	0.09100000 BTC
Effective cost per BTC	\$108,967.39	\$109,890.11

Read the result carefully. A delivers 0.001 BTC more and costs \$25 more in total. A has the lower effective cost per BTC. The calculation does not tell you whether the provider, timing, review conditions or custody arrangement meets your needs.

Check what the numbers do not show. Independently verify the operator and website, confirm your account’s eligibility, identify who controls the keys, read any holds, and find official support. A genuine purchase service can still be used to send funds to a scammer.

Our commercial interest. Crypto Dispensers publishes this worksheet and offers Bitcoin purchases. Apply these checks to us too. Bitcoin can lose value, and this worksheet does not verify any provider, recipient or order.
