

## SCHEDULE 11 – Significant Waterbodies

This schedule lists the significant waterbodies in the districts that are identified based on the following criteria:

1. the waterbody and/or its margins have high natural character and ecology values, including natural aquatic habitats that support the presence of threatened, at risk, or regionally distinctive indigenous species;
2. the waterbody is of a nature and magnitude that creates a risk for natural hazards;
3. use of the waterbody and/or its margins for recreational and public access purposes including walking, surface water activities, fishing, hunting, and tramping;
4. cultural, spiritual, or heritage associations of tangata whenua to the waterbody, including ability to undertake customary activities; and/or
5. importance of water quality, including for urban water supplies, and in relation to the above values.

Natural Wetlands have not been identified in this schedule as they are either identified in the Greater Wellington Regional Council Proposed Natural Resources Plan (appeals version 2019) and relevant protection is provided through the rule provisions, or are captured by the Resource Management (National Environmental Standards for Freshwater) Regulations 2020 which provides for relevant protection through the regulations.
