IRONCORE COLLECTION

Sustainable Choice

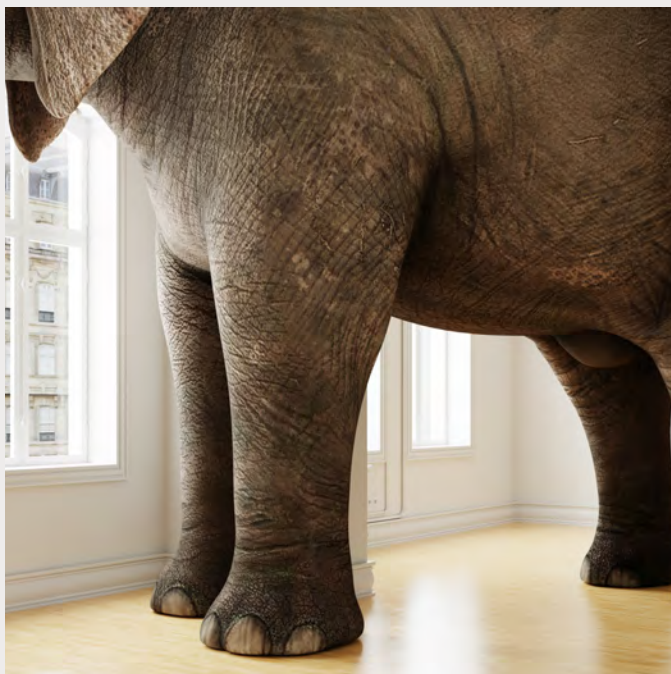

FAME HARDWOOD veneer boards are not only more resistant to spot damages than traditional engineered boards, but they are also a more ecological alternative. Trees are important to us. We use a thin layer of wood, thus maximizing its use. Using this technology, we can produce up to 10 times more m2 of flooring from the same log than in the production of traditional engineered or solid boards.

Real Wood

FAME HARDWOOD boards have an authentic wood top layer. The beauty of nature lies in its diversity and details. Just as each tree grows differently, no two boards will be alike. Invite nature into your home and create a natural and authentic look. Feel the warmth of authentic wood.

IRON CORE

The thinner the top layer, the more resistant the board is to impacts or dents.

FAME HARDWOOD boards have a core of - wood fiber boards.

IRONCORE is characterized by a very high density and hardness, greater than real wood. Thanks to this, our floors are more resistant to impacts, heavy objects or women's high heels.

Perfect for Underfloor Heating

Thanks to the use of a thin top layer and IRONCORE, FAME HARDWOOD boards have 3 times lower thermal resistance than traditional engineered flooring. The high-density core allows very good conduction and subsequent long heat retention. The boards are less prone to deformation.

IRONCORE

The core is made of IRONCORE board which is characterized by higher density and hardness than real wood. Thanks to this technology, we can use a thinner top layer, while increasing the resistance of a board.

Uniclic locking system - easy installation

Bottom layer

Back layer made from natural veneer.

Hardness

Spot damages in FAME HARDWOOD board

The wear layer of the board is supported by high-density IRON CORE, which, together with the pore-filling adhesive, prevents deep damage.

Spot damages in standard engineered flooring

Deep damage is the result of porosity and a soft pine core or spruce core that does support the slats.

15-year warranty | RESIDENTIAL
5-year warranty | COMMERCIAL
LIFE TIME STRUCTURAL

Innovative combination of wood and resistance

Protective Layer of Lacquer or Oil

The FAME HARDWOOD board is finished with 7 layers of lacquer, thanks to which it is resistant to everyday dirt, abrasion or scratches or, optionally, it is finished with oil, which makes it possible to easily and quickly renovate the floor.

Real Wood

- Top layer is made from natural wood that gives a unique appearance for each board.
- Easy to install - loose laid- no underlayment required-no glue required - can put it directly on current wood floors or concrete- easy to pull apart for repairs or reuse.
- High moisture resistance- almost waterproof-seals water from penetrating seams
- Anti-microbial and easy of maintenance
- Dimensional stability-less prone to warping or expanding
- Excellent machinability- easy to cut, drill and shape with precision
- Smooth surface
- Janka hardness rating higher than engineered wood

Made by Nature

Enjoy the warmth and uniqueness of a real wood.

AB

The best quality wood, small, healthy knots, slight differentiation in color, any type of graining

Small knots

Cracks

ABCD

Combination of AB and CD classes, small, medium and large knots, slight variation in colour, any type of graining, occasional edge sapwood

Medium knots

Cracks

CD

Rustic class wood, high saturation of knots of all sizes, cracks, gloss, sapwood, large variation in color, any grain

Big knots

Cracks

IRONCORE COLLECTION

Plank

FAME HARDWOOD boards are available in many sizes. The size of the interior matters, which is why narrower and shorter planks are recommended for smaller rooms, while wide and long planks are better for large spaces.

Width: 140 to 300 mm

Length: 400 to 2200 mm

Available thicknesses:

0.6/7.5 mm

0.6/8.5 mm

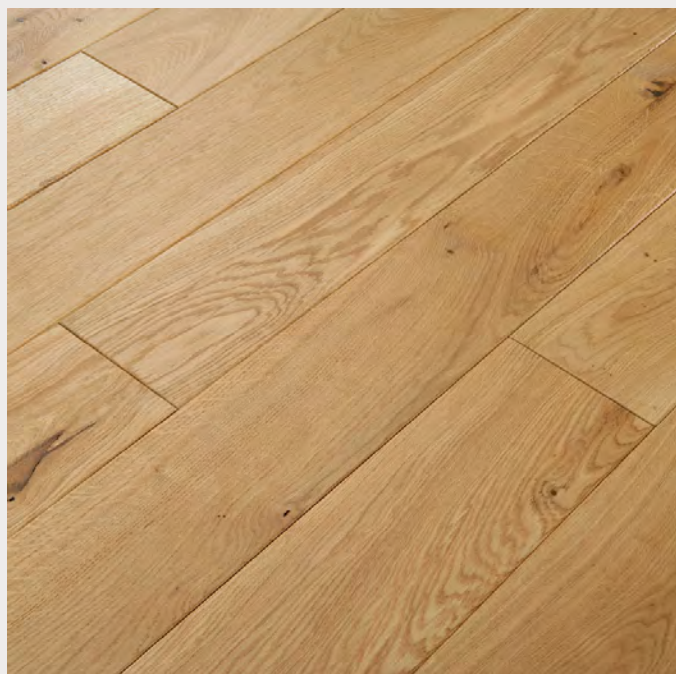

1.5/9.5 mm

3.0/10.3 mm

3.0/11.3 mm
