Dedicated to Diagnostics

Alliance Medical Your Trusted Partner in Diagnostic Imaging

Introduction to Alliance Medical

Welcome to Alliance Medical,
your trusted partner for
diagnostic imaging services.

Whether you're a healthcare professional looking for reliable, high quality scanning services for your patients or an individual looking for fast access to care, we can meet your needs. We've been leading the way in advanced diagnostic imaging for over 36 years. Our expert teams combine service excellence and innovation to improve patient access, experiences, and outcomes.

Read on and discover more about our services...

National PET-CT contract holder

We are... dedicated to diagnostics.

We have:

8 Community
Diagnostic Centres

1,200
members
of staff

→ MRI, CT-Scanner
← Ultrasound, PET CT
↑ X-Ray

67
scanning
centres

5 radiopharmaceutical
production facilities

Community Diagnostic Centres

Away from busy hospitals, our community diagnostic centres are designed with patients in mind. They are welcoming and modern, with easy way-finding, multiple diagnostic services, fast access to appointments and ample parking.

Our expert teams, work in close collaboration with NHS trusts and have proven to dramatically reduce their waiting lists. We're extremely proud of our role in delivering life-saving diagnostics close to patients' homes.

Our well-equipped centres feature cutting-edge imaging technology such as digital PET-CT, alongside more traditional diagnostic testing such as MRI, CT, endoscopy, X-Ray and Phlebotomy. This has meant we can carry out both advanced cancer scanning and multiple test bundles on the same day for the patient; a vital step forward in pathway design, reducing waiting lists and closing the care gap.

- We've mobilised 8 Community Diagnostic Centres
- Reduced MRI waiting lists by 46.6% and CT waiting list by 68% - at our Cannock Centre
- Reduced 'Referral to Decision to Treat' from 52 days to 32 days - at our Oldham Centre

As proud NHS partners we deliver CDCs across the country, providing more scans and better detection of cancers and diseases such as Alzheimer's.

Mobiles

When it comes to mobile scanning, we're proud to be a trusted industry name. Deployed rapidly across the country, our diagnostic imaging support is delivered directly to your door whenever you need us.

Equipped with advanced scanning technology for your patients and comfortable, spacious environments, our mobile service delivers reliable on-the-go support to boost your scanning capacity and reduce waiting lists.

Our service boasts an industry leading uptime, 24/7 operational support and a dedicated resource planning team, working 7 days a week for you.

We have proven to maximise patient throughput across MRI, CT and PET-CT modalities whilst keeping patient experience at the forefront of all we do. Plus, we offer wholly bespoke solutions, so our service is always tailored to your exact requirements.

Choose from:

- Our range of reliable, high-quality mobiles
- Our innovative and expandable CT Mobile Medical Plus fleet
- Relocatable units
- Or even a mobile village.

Our Fleet

Our Fleet includes:

MRI Mobiles

- Philips 1.5T Ingenia
- Siemens 1.5T Aera
- Siemens 1.5T Avanto
- GE 1.5T Voyager
- GE 1.5T Explorer

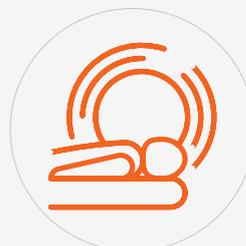

CT Mobiles

- Canon Aquilion Prime SP
- GE Revolution EVO 128 Slice
- GE 660 128 Slice

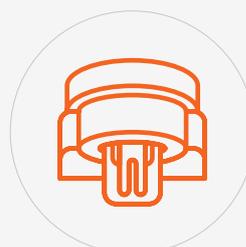

CT Expandable

- GE Revolution EVO 128 Slice

MRI Relocatable

- Siemens 1.5T Aera
- GE 1.5T Voyager
- Philips 1.5T 5400 (exclusive BlueSeal magnet)

PET-CT Mobiles

- GE Discovery 710 64 slice

Leading the way in PET-CT

As the National PET-CT contract holder for NHS England, we deliver NHS PET-CT services to 80% of England, lead the Molecular Imaging Collaborative Network and manufacture and distribute PET radiopharmaceuticals at 5 UK sites.

We're dedicated to making PET-CT more accessible, and further we're creating a service where patients have access to the most advanced digital PET-CT technology for cancer diagnostics.

Digital PET-CT

Digital PET-CT not only allows for lower radiation for the patient, whilst retaining superior image quality, but affords us reduced scan times - in some cases seeing a 140% increase in scans per hour. This means we are quite significantly increasing our daily appointment slots, better meeting the increasing demand for scans and providing more PET-CT scans than ever before - which we know is a vital service for cancer patients and clinicians.

- 5 radiopharmaceutical production facilities
- F18-PSMA, Amyloid and FDG tracer availability
- Next day PET-CT appointments
- 43 PET-CT scanning centres

Tracers

Our ready availability of advanced tracers including F18-PSMA, Amyloid and FDG means we can provide clinicians with the specific and immediate insights they need to enable precise, swift diagnoses and tailored treatment strategies for their patients.

We are exceptionally proud of our work in PET-CT. Over the last 10 years we've keenly focused on advancing diagnosis, primarily in Cancer and more recently for Alzheimer's and other neurological conditions to inform diagnosis and treatment options, saving and extending lives in the process. Through our extensive investment in PET-CT, our experts will be able to continue this vital work and more and more patients will access these life-saving scans.

Our investment in PET-CT is improving diagnostic pathways, creating more access, better treatment options and overall survival rates.

Research

We are actively engaged in innovative research, including dementia trials, cancer studies, osteoarthritis, MRI knee, brain and functional brain work. Our expert GMP-trained staff deliver research imaging including MRI, CT, PET-CT, Ultrasound and X-Ray.

We're especially proud to support ground-breaking research in treating Alzheimer's disease and dementia, passionately supporting the journey towards a cure.

How do we support?

- **We've contributed over 2,000 scans**, together with radiotracers, to national clinical research programmes.
- **We have invested over £100million in PET-CT**, bringing world-leading digital technology to the NHS and working directly with Alzheimer's Research UK to provide support in the study of Alzheimer's disease.
- **We are the only UK producer of 18F-florbetaben (NeuraCeq®)** used in the evaluation of dementia and Alzheimer's Disease. We provided this tracer for clinical trials.
- **We supported the trial for new drug Donanemab** with vital PET-CT scans. This drug was successful in recent studies, proving it can slow down cognitive decline in those suffering from Alzheimer's.
- In February 2024, our amazing team at Marylebone featured on **BBC Panorama "Alzheimer's: A turning point"** – an inspiring episode highlighting the ground-breaking progress that has been made in Alzheimer's research
- **Our five radiopharmaceutical production facilities** allow us to quickly supply high-quality isotopes for trials.
