

MediaSilo is where your work goes to move. While on-prem systems handle the internal production, MediaSilo is the dedicated engine for work-in-progress, external sharing, and stakeholder approval. It bridges the gap between your secure local edit and the global feedback loop.

By leveraging an industry-leading AI engine to automatically index faces, logos, and speech, MediaSilo AI transforms files into interactive, searchable assets without the need for manual tagging.

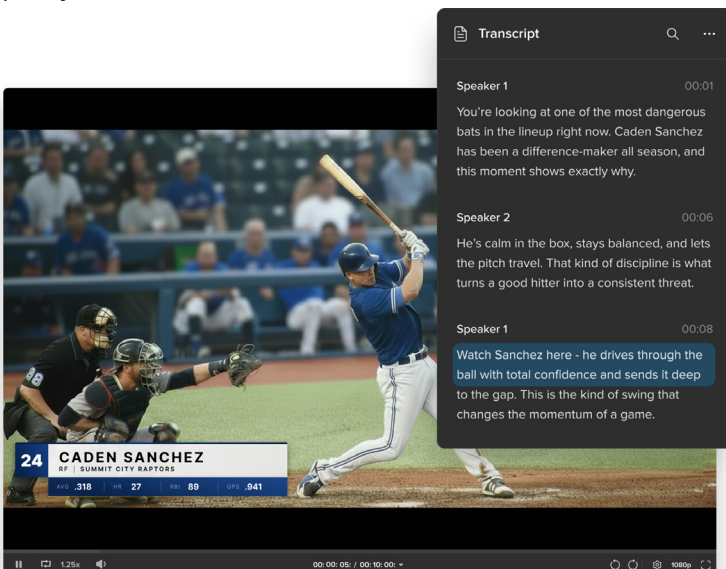

This cloud-native workspaces specializes in high-velocity workflows, offering “Captions on Command” and a “Transcribe & Jump” feature that allows users to navigate directly to specific timecodes. All processing occurs within a secure, “Hollywood-grade” environment, ensuring that your creative secrets are never used to train third-party models.

## Feature Highlights

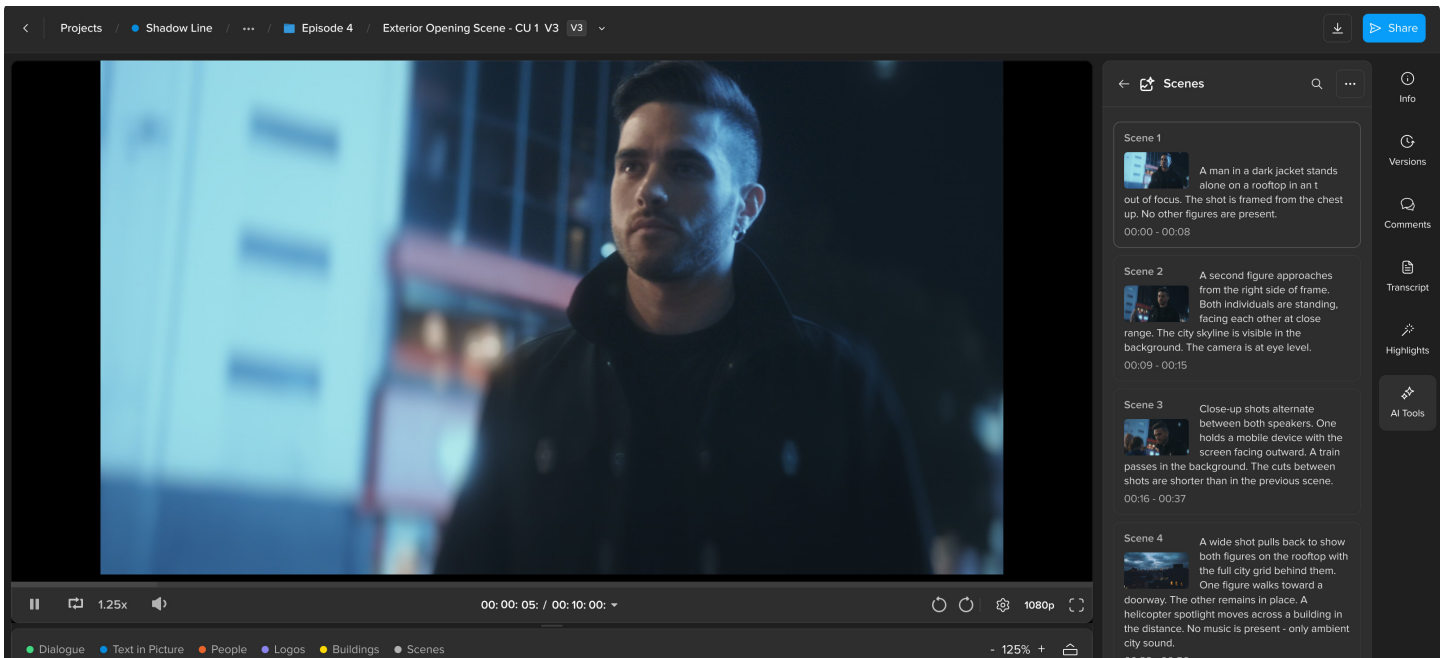

### KEY FEATURES & CAPABILITIES

Unlocking the value of your media shouldn't require manual tagging or folder-diving. MediaSilo AI indexes every word, face, logo and scene automatically.

- ▶ **Automatic Transcription & Captioning**  
Generated upon upload, time-coded transcripts are ready for SRT export. Click any word in the transcript to jump the playhead to that exact frame.
- ▶ **Intelligent Global Search**  
Search by what is said (dialogue) and what is seen (visuals) simultaneously. Find the exact moment inside the asset in seconds.
- ▶ **Scene, Entity & OCR Detection**  
Automatically breaks video into logical, clickable segments. Identify and track specific faces (CEOs, actors), brand logos, and on-screen text or lower-thirds across your entire library.
- ▶ **Retroactive Indexing**  
Every asset you've already uploaded gets smarter. MediaSilo AI processes your existing archive, making years of old footage findable overnight without the need for re-uploading.

Transcription Syncing - Visual representation of the integrated STT engine in action.

A visual dashboard displays the video panel with key scenes marked by timecode.

## SECURE CLOUD PROCESSING YOUR FOOTAGE. OUR CLOUD. NOT THEIRS.

While competitors focus on AI hype at the expense of stability, we prioritize “white-glove” security standards.

### ► Data Sovereignty

AI processing happens entirely within MediaSilo’s secure cloud environment. Your footage never leaves our system to be processed by a third-party service (Zero Leakage).

### ► No Training

Your content is never used to train someone else’s model.

### ► Studio-Grade Security

Built to meet the rigorous compliance standards of major studios like Marvel and HBO, including forensic watermarking.

## DESIGNED FOR EVERY TEAM

MediaSilo AI features an intuitive UI that bridges the gap between raw footage and actionable insights.

### ► Project-Level Control

Admins can set rules to auto-process audio, images, or video, or manually toggle AI for specific projects to optimize cloud usage and costs.

### ► NLE-Agnostic & Stable

Download transcripts and captions to use in any NLE, including DaVinci Resolve and Premiere Pro. We focus on stability. No “bricking” bugs, “authenticating loops,” or sync issues.

### ► Predictable Pricing: The Anti-“Collaborator Trap”

We offer enterprise-grade controls for the “Missing Middle” of professional production teams (10–30 users) without the \$10,000+ price jump.

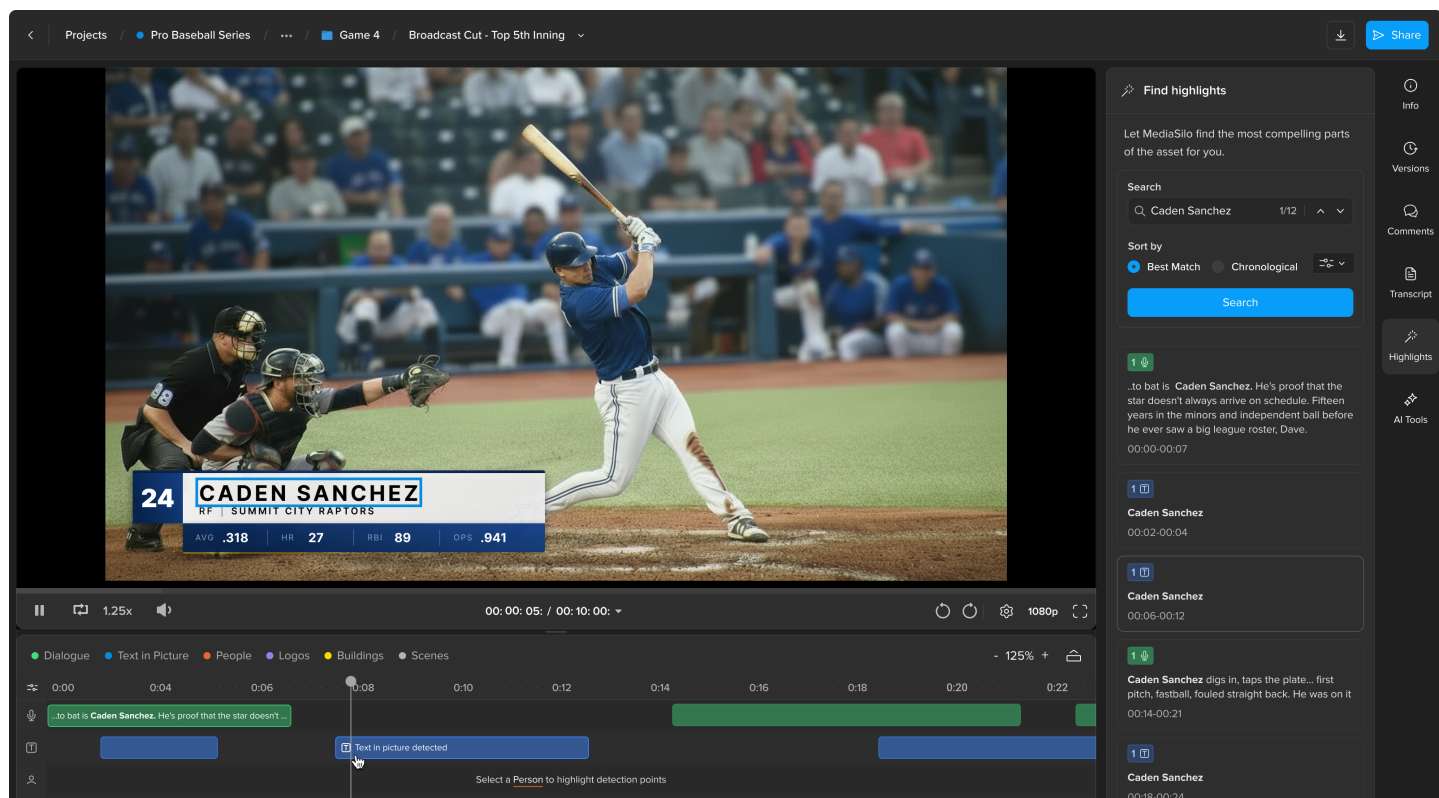

### ► No “Collaborator” Traps

Stop paying \$15–\$25/month for every client who clicks a link. MediaSilo allows unlimited reviewers to view work without requiring logins or triggering “per-seat” charges.

### ► No Sneaky Upcharges

Access transcripts and captions without per-minute fees or gated exports. We provide transparent billing without the surprises found in other review tools.

# Visual Intelligence in Action

MediaSilo AI allows you to search dialogue, captions, logos and visual elements across all your content.

## MEDIASILO AI MAKES LIBRARIES USABLE, INTELLIGENT, AND MORE VALUABLE THAN EVER.
