Embargo until 09:00, February 3rd

## **X-FELT Floating: Elevating Architectural Acoustics with Sustainable Design**

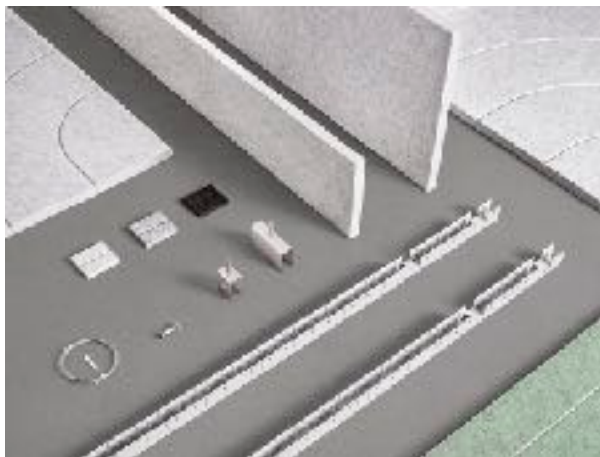

**Stockholm, Sweden, February 3, 2026** – BAUX is launching X-FELT Floating, designed to integrate acoustics seamlessly into architectural design. Consisting of Floating Panels, Baffles, and Grids, this range enables architects and designers to create interiors that are both visually compelling and acoustically balanced, supporting overall wellbeing.

**X-FELT Floating** will make its debut at the Testing Grounds Showroom, an event hosted by Form Us With Love, where visitors will have the opportunity to experience these acoustic solutions for the first time. Testing Grounds 2026 will take place at Norr Mälarstrand 58, Stockholm, from February 3 to 5, 2026, before transitioning into a temporary showroom open by appointment until May 28, 2026. We invite you to explore how BAUX is redefining the role of acoustics in design.

X-FELT Floating, designed in collaboration with the renowned design studio **Form Us With Love**, is focused on building spaces with integrated acoustics in mind:

'With X-FELT Floating, we aim to fuse acoustics with architectural aesthetics, offering designers and architects the tools to craft inspiring spaces that not only captivate visually but also enhance wellbeing,' says John Löfgren, Co-Founder of Form Us With Love.

X-FELT Floating is part of BAUX Acoustic X-FELT, launched in early 2025 during Stockholm Design Week. Crafted from GRS-certified PET fibres, X-FELT offers a sustainable design choice with exceptional sound absorption and unique fire safety features. By avoiding harmful chemicals, it ensures safety and performance, making it ideal for architects and designers seeking acoustically optimised and eco-friendly spaces.

'X-FELT Floating opens exciting new avenues for architects and designers, providing versatile building blocks that seamlessly integrate superior acoustics with innovative architectural aesthetics,' says Fredrik Franzon, CEO at BAUX. 'This launch empowers architects and designers to create environments that profoundly impact wellbeing, fostering spaces where creativity and productivity can flourish through thoughtful design and installation.'

Installation is designed for efficiency and elegance. Floating Panels, Baffles, and Grids are suspended from the ceiling using BAUX-designed metal brackets and a wire kit, allowing for seamless integration into any interior. This premium hardware ensures a secure fit while enhancing the overall aesthetic of the space, exemplifying BAUX's commitment to design in every detail.

**X-FELT Floating Panels:**

Lightweight, suspended elements that define zones, create niches, build room-in-rooms, and improve acoustic comfort.

Available in 1000 x 2800 mm, 25 mm thickness.

**X-FELT Floating Baffles:** Modular solutions that shape open interiors from above, integrating acoustics as a key architectural element.

Available in two heights (200 mm and 400 mm) and two lengths (1500 mm and 3000 mm), 25 mm thickness.

**X-FELT Floating Grids:** Versatile overhead structures that bring order and acoustic balance to any space.

Available in two heights (200 mm and 400 mm), 3000 x 3000 mm, 25 mm thickness.

**Prices available upon request**

**About BAUX**

BAUX is founded on the belief that building materials should be sustainable, surprisingly functional and remarkably beautiful. Headquartered in Stockholm, Sweden. BAUX designs, produces and markets construction materials that meet the contemporary expectations of architects, engineers and builders - without compromising safety and environmental standards. Since launching in 2014, BAUX has grown to have representation in over 30 regions worldwide, with clients such as Google, Stella McCartney, WeWork, Spotify and Nike. BAUX is a joint venture by entrepreneurs Fredrik Franzon, Johan Ronnestam and, the founding partners of the design studio Form Us With Love: Jonas Pettersson and John Löfgren, and the founder of Hem Design Studio, Petrus Palmér.
