

## Estonian Design to Take the Spotlight during 3daysofdesign 2026 as Silen is Set to Showcase Space Gen 2, a New Generation of Sustainable Office Pods

*Space Gen 2 will be presented at the Embassy of Estonia in Copenhagen as part of Slowing, an exhibition celebrating contemporary Estonian designers*

**(March 23, 2026 – Tallinn, Estonia)** – Leading office pod manufacturer [Silen](#) will present Space Gen 2, its new range of sustainable office pods, during *3daysofdesign* in Copenhagen from 10-12 June 2026. The collection will be showcased at the Embassy of Estonia at Store Kongensgade 66, 1264 Copenhagen in the Frederiksstaden District, as part of *Slowing*, an exhibition bringing together a curated selection of contemporary Estonian design brands.

Rooted in culture shaped by nature and quiet reflection, **Space Gen 2** embodies the same idea at the heart of the exhibition. For example, in Estonia, forests cover more than half the country, and the forest is a place where silence creates privacy, and privacy gives people the freedom to think. That same principle informs the design of every Silen pod. Presented within the context of *Slowing*, Space Gen 2 reflects a broader cultural perspective shaped by nature and quiet reflection and exemplifies how design can create environments that encourage focus, calm and clarity.

The range includes **Space Call**, **Space Work**, and **Space Meet 2**, which all offer Class A sound insulation with two-way privacy and flexible solutions for private calls, focused work, and collaborative meetings within modern workplaces. During *3daysofdesign*, visitors to the Estonian Embassy will have the opportunity to explore **Space Work** and **Space Meet 2** and see firsthand how each model is tailored to support specific modes of daily work.

**Space Call** provides a compact, highly acoustic sanctuary for quick phone calls and virtual meetings. For an extended period of deep focus, **Space Work** offers an expanded interior equipped with a controlled indoor climate and flexible setup options to comfortably support long-duration solo tasks. Designed for shared productivity, Space Meet 2 introduces an environment engineered for one-on-one collaboration with a comfortable setting for private meetings.

“With the new Space Gen 2 offering, we continue expanding Silen’s architectural portfolio with innovative pod solutions,” says Endrus Arge, founder and CEO of Silen. “Space Gen 2 is the outcome of our team’s dedication to creating a dynamic, modular system that sets a new standard for how environmental responsibility and human-centric design intersect in the modern office. The collection’s 20-year lifespan, responsibly sourced, eco-friendly materials, and design maximise user comfort and functionality, building a strong foundation for Silen to continue offering pod solutions for efficient workplaces.”

The new pods offer a new structural framework built on a durable cassette system of 60% recycled aluminum extrusions, with castors for easy relocation. Silen Dynamics, a modular base of magnetic and interchangeable panels, allows end-users the flexibility to refresh the design with a choice of multiple finishes and exterior colour options. This offers customisation that conceals structural tracks and retrofits new technologies as workspace needs evolve.

Beyond performance and adaptability, the Space Gen 2 range sets a rigorous standard for environmental responsibility. Backed by an EC Declaration of Conformity and an Ecovadis Bronze rating, the pods are constructed primarily from aluminium, steel and glass, utilising high percentages of repurposed materials, including 60% recycled aluminium, 65% recycled glass, and at least 50% recycled steel. To further support strict indoor air quality goals, the manufacturing process relies on minimal adhesive construction, utilising zero- and low-VOC materials and chemical-free, post-consumer recycled textiles, earning the pods a Certified Indoor Air Quality certification. At the end of their lifecycle, the lightweight modular cassettes can be taken apart and separated by material type, ensuring the main components remain 100% recyclable to prevent unnecessary landfill waste.

Space Gen 2 represents a fundamental shift in how workspaces are designed and experienced. By merging architectural details with uncompromising wellness and sustainability standards, Silen equips designers, specifiers and companies with the tools they need to navigate the evolving demands of the modern office. The result is

a high-performance privacy solution that is as adaptable as it is refined, engineered to perform and built to evolve alongside both people and spaces over time.
