

Island Fact Sheet

Island, the Enterprise Browser company

Company Description

Island, the Enterprise Browser company, offers a new way for enterprises to deliver and secure applications.

By embedding core security, IT, and productivity needs into the browser itself, enterprises maintain full control and protection over application workflows and sensitive data. Meanwhile, users simply open a browser and start working.

By reimagining the workspace, Island gives end users a smooth, simple, and enjoyable experience.

Why Create the Enterprise Browser?

Island, the Enterprise Browser,
**makes work smooth and secure
at the same time.**

The most widely used application, by far, in enterprises is the web browser. It's fast becoming enterprises' default workspace. And yet, the common browsers used for consumer use cases are not enterprise applications.

This forces IT and security leaders to surround consumer browsers with a massive and complex ecosystem of add-on products, each giving only partial control and visibility over the one place where the most work happens. The results: a stretched budget, more complexity, stressed admins, and frustrated users.

Island, the Enterprise Browser, makes work smooth and secure at the same time. Island can uniquely build security, IT, and productivity capabilities that solve enterprises' most vexing technology challenges. Island means happy CIOs, happy CISOs, and happy end users.

550

Co-founders

Mike Fey, CEO

Mike brings extensive experience in cyber security, enterprise software, and cloud technology. He served as president and COO at Symantec and prior to joining Symantec, he served as president and COO of Blue Coat. He led Blue Coat's aggressive growth, resulting in its acquisition by Symantec for \$4.7 billion in 2016. Prior to that, Mike was EVP and general manager for enterprise products at McAfee and chief technology officer of Intel Security, playing a pivotal role in Intel's acquisition of McAfee for \$7.7 billion in 2010.

Dan Amiga, CTO

Dan is responsible for driving innovation to protect organizations' critical data and easily deliver enterprise applications. He brings deep IT security experience, including inventing browser isolation technology. Dan was the founder and chief technology officer of Fireglass, which Symantec acquired in 2017. Prior to Fireglass, he was the chief software architect of Schneider Electric, the Fortune 500 international software and hardware energy firm. Before that, he led the software security department for the Microsoft Technology Center in Tel Aviv, helping financials, governments, and critical infrastructure companies deliver security to their business.
