

CASE STUDY:

Vistamatic Vista Safe Vision Panels at Aegis Health

PROJECT OVERVIEW

Aegis Health, a leading provider of exceptional care services in Western Australia, has recently completed construction of a 36-bed Private Mental Health Facility in Perth's southern corridor. The new clinic which is soon to open, will be offering inpatients therapeutic treatment and support in a safe, modern environment.

During the design and build, Aegis Health required a solution that balanced patient privacy with staff visibility, while also meeting the stringent safety requirements of a mental health facility.

THE CHALLENGE

Mental health environments demand specialist door hardware that prioritises patient wellbeing while enabling staff to maintain visibility and security.

Aegis Health needed a **secure, anti-ligature vision panel** for each of the 36-bedroom doors—giving patients the ability to control privacy from inside, while ensuring staff could gain immediate visibility when required.

PROJECT OVERVIEW

Engaging Larnec, the exclusive distributor of **Vistamatic Vision Panels** in Australia, Aegis selected the **Vista Safe 404 x 404 Anti-Ligature Vision Panel with stainless steel surrounds**.

The **Vista Safe Panel** is engineered for safety-critical healthcare environments. Triple-glazed glass and marine-grade stainless steel provide long-term resilience, while the lockable system gives patients internal control and staff secure key access.

To confirm suitability, Larnec supplied a sample panel showcasing thumb-turn and key-lock operation. This hands-on demonstration allowed Aegis to validate functionality prior to full installation.

PROJECT OUTCOME

The panels were supplied and installed across all bedroom doors, the panels were **easy to install** and presented a **clean, professional finish**, aligning with the high-quality standards of the new clinic.

RESULTS

The installation of Vistamatic Vista Safe vision panels has delivered:

- **Enhanced** patient safety through anti-ligature, tamper-proof design.
- **Improved staff visibility and control**, supporting responsive patient care.
- A **seamless architectural finish** that complements the modern clinical environment.

WHY LARNEC?

This project highlights Larnec's capability to deliver specialist door and vision panel solutions to the Australian healthcare sector. Larnec partners with healthcare providers, architects, and builders to deliver solutions that prioritise safety, compliance, and performance in sensitive environments.

Whether for hospitals, mental health facilities, or rehabilitation centres, Larnec is a trusted supplier for tailored personal access door systems and vision panel solutions.

Project Location: Murdoch, Western Australia

Products Supplied: 36 x Vistamatic Vista Safe 404 x 404 Anti-Ligature Vision Panels with stainless steel surrounds.
