IMPORTANT FIRE SAFETY INFORMATION

Exterior vinyl building materials require little maintenance for many years. Nevertheless, common sense dictates that builders and suppliers of vinyl products store, handle and install vinyl materials in a manner that avoids damage to the product and/or structure. Owners and installers should take a few simple steps to protect vinyl building materials from fire.

TO HOME AND BUILDING OWNERS

Rigid vinyl siding is made from organic materials and will melt or burn when exposed to a significant source of flame or heat. Building owners, occupants, and outside maintenance personnel should always take normal precautions to keep sources of fire such as barbecues and combustible materials such as dry leaves, mulch, and trash away from vinyl siding.

TO THE BUILDING TRADES, SPECIFIERS, PROFESSIONALS AND DO-IT-YOURSELFERS

When rigid vinyl siding is exposed to significant heat or flames the vinyl will soften, sag, melt, or burn, and may thereby expose material underneath. Care must be exercised when selecting underlayment materials because many underlayment materials are made from organic materials that are combustible. You should ascertain the fire properties of underlayment materials prior to installation. All building materials should be installed in accordance with local, state and federal building code and fire regulations.

Wall Fire-Resistance Matrix				
	Wall System	Interior Underlayment	Exterior Sheathing	Popular Residential Claddings*
Non-Rated Wall	Any Conventional Construction	½" Gypsum Board	Any Conventional Materials	Wood Plywood OSB
Interior Underlayment	Any Conventional Construction	1 Layer of ½" Gypsum Board	Must Include 1 Layer of ½" Gypsum Board	Hardboard Steel
Interior Underlayment	Any Conventional Construction	2 Layers of ½" Gypsum Board	Must Include 2 Layers of ½" Gypsum Board	Aluminum Vinyl

*Note: Fire-treated versions may also be available for some popular wood-based siding products.

For general information about vinyl siding products, contact the Polymeric Exterior Products Association (PEPA), 1800 Diagonal Rd. Suite 545 Alexandria, VA 22314. Request brochures titled "Fire Properties" or "What Homeowners Want to Know."

PROTECTION

Direct contact of aluminum products with certain dissimilar materials, or contact with water run-off from dissimilar materials, is likely to result in corrosion of aluminum products. See warranty and installation instructions for more details. Accordingly, care should be taken during installation to avoid such contact of aluminum with dissimilar materials including dissimilar metals (e.g. copper, zinc, steel, etc.), concrete, stucco, asbestos siding, pressure treated/pre-treated lumber, masonry, roofing materials, or roofing systems containing metallic granules or strips, or corrosive non-metallic materials.

DELIVERY, STORAGE AND HANDLING

Deliver rigid polypropylene siding products to the project site in their original packaging. Store rigid polypropylene products in their original packaging on a flat surface under cover, stacked no more than 12 boxes high. Do not store in a location where temperatures may exceed 130°F.

IMPORTANT: FIRE SAFETY INFORMATION

Rigid polypropylene siding is made from organic materials and will melt or burn when exposed to a significant source of flame or heat. Property owners, occupants and maintenance personnel should be familiar with the performance characteristics of underlayment materials. For maximum safety, non-combustible underlayment materials are recommended. Normal precautions to protect rigid polypropylene building materials from sources of fire should be taken. Barbecues and combustible materials, such as dry leaves, mulch and trash, should be kept away from polypropylene siding.
