

# Convenient and Flexible Ride Booking on an Easy Mobile App

So you provide transportation for your clients, but you're constantly fielding cancellation calls, impatient riders, and new needs. What if this could all be handled by a few taps on a screen?

You don't have to be Uber or Lyft to provide apps and alerts to your client! Engage by Cell's Ride Booking and Management platform allows users to book a car and drivers to transport them, just like a taxi.

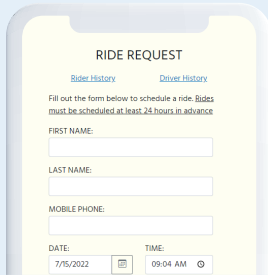

## How Does it Work?

1.

### Users

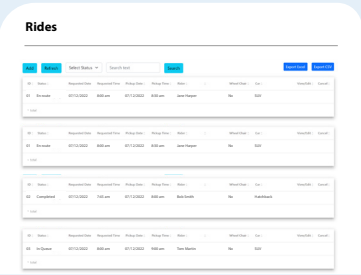

Users request rides through a branded calendar page and receive notifications via automated text messages. No sign-up or sign-in required.

2.

### Admins

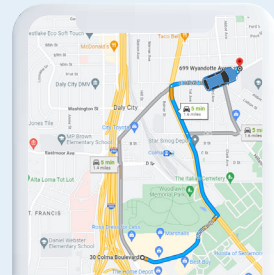

Admins schedule drivers from the Engage by Cell dashboard and monitor trips with real time ride tracking.

3.

### Drivers

Drivers are guided along their route through GPS technology with step-by-step instructions.

## We Keep It Simple

- No coding required
- No IT department needed
- No downloads or visits to the app store
- All changes are made in real time
- Include your organization's brand with custom colors and logos

# Happy Riders. Happy Drivers. Happy You.

## Let's get started today!
