

# Core Infrastructure Upgrades & IT Stability:

## FELLOWSHIP CHURCH + VELO IT GROUP

Fellowship Church is one of the most prominent churches in the Dallas–Fort Worth area, with multiple campuses, a global online reach, and a mission that depends on operational excellence. Like many modern churches, Fellowship relies heavily on technology to stream services, manage content, and maintain strong connections across locations. But a few years ago, they found themselves grappling with aging infrastructure and limited capacity to manage it.

“We were at a point where we had some aging gear and just different pieces we knew we had to tackle,” said Dave Clark, Associate Pastor at Fellowship Church.

That’s when a casual volunteer conversation turned into a long-term partnership. “Through my involvement with volunteering, I found myself in a conversation with Dave talking about technology,” said Taylor Toce, CEO of Velo IT Group. “I said, ‘Hey man, we can help with this.’”

That conversation kicked off a co-managed IT engagement that continues to strengthen operational stability for the church today.

## PREDICTABLE COSTS

One of the early wins was transitioning Fellowship to a hardware-as-a-service model. “A lot of our core switches, servers, even access points are now part of a service agreement with Velo,” said Dave. “Everything stays up to date, and we’re on a fixed monthly rate, so we’re not dreading a massive cash outlay down the road.”

This model has allowed the church to stay current and confident. Dave shared, “We have a plan. We know we’re going to be up to speed, and everything is going to work well.”

FELLOWSHIP CHURCH

“Velo helps us think through the technical details so we can focus on what we do best.”

## EVERY WEEKEND, WITHOUT FAIL

With multiple locations and over 100 access points across half a million square feet, the infrastructure must perform—every weekend, without fail. “We’re generating nearly a terabyte of data each week,” said Dave, “The pressure on our systems is real.”

Whether it’s protecting against phishing emails or troubleshooting local device issues, Fellowship’s team knows they have backup. “Velo has helped increase our efficiency by giving us experts we can lean on—no matter the problem,” Bobby Slape, part of Fellowship’s internal IT team added.

## BUILT TO SERVE

The partnership with Velo is designed to allow Fellowship to focus on what matters most. “We’re a technology-intensive organization,” Clark said, “but we don’t want to get stuck in the weeds. Velo helps us think through the technical details so we can focus on what we do best.”

That clarity is mutual. “We’re honored to serve Fellowship,” said Toce. “Our role is to simplify the technology so they can amplify their mission.”

For Velo, this partnership isn’t just business—it’s personal. “We were built on the concept of being built to serve,” said Toce. “That comes straight out of 1 Peter 4:10. Serving Fellowship Church is a privilege, and our reward is seeing the impact they have—not just in DFW, but around the world.”

## HUMANIZING TECHNOLOGY

Ultimately, we’re here to serve people who are doing things, making things happen, and changing the world for the better.
