

STRUCTURAL AND WILDFIRE GLOVE SIZE CHART

How to measure the glove size

Choosing the correct glove size is really important to get the optimum safety and grip sensation. Before buying firefighting gloves you should determine your glove size. To measure the circumference of the hand use a measuring tape, which you should twisted around the knuckles on the backhand (excluded thumb). The hand must be bend a little bit (like on the picture). If you don't have any measuring tape, you can also use a thread. Twist it around the knuckles at first and then measure it with a ruler. The measured circumference value in cm indicates the hand size. Then use the following table to determine the required size:

6	7	8	9	10	11	12	13
XS	S	M	L	XL	XXL	3XL	4XL
16,5 cm	19 cm	22 cm	24 cm	26,5 cm	29 cm	32 cm	35 cm

Size = 9 (24 cm)
