

Solo Data Factory

Solo Data Factory (SDF) is ROGII's operations-focused regulatory data hub for onshore field development.

Pulling from various regulatory agencies, it is continuously updated to serve as a central hub for well data, competitor analysis, and well planning.

Connect with Solo to bring the data directly into your StarSteer project.

How SDF works

Frequently Updated

48-hour turnaround time for newly drilled lateral wells in North America

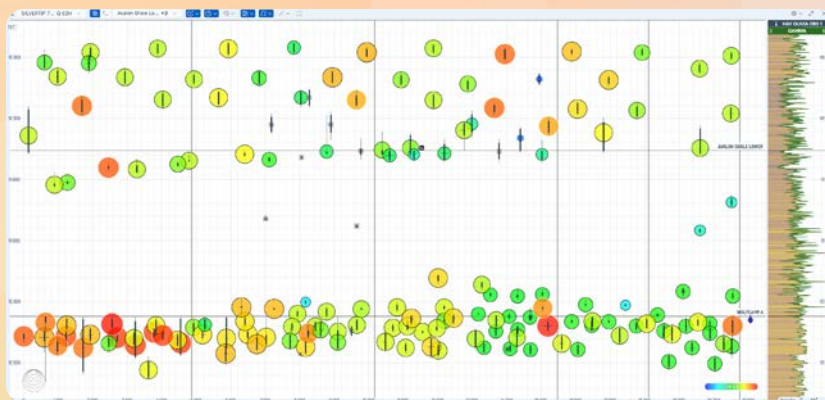

Simple Integration

Initial access is easy through Solo Cloud and integrates nicely with operator-specific data (lease lines, grids, etc)

Clean, Structured Data

Consistent well headers, trajectory and log data for offset well planning and competitor landing analysis, as well as readymade for gun barrel plots

Gun Barrel Plot

SDF solves one of the industry's biggest challenges: **quick access to relevant, high-quality regulatory well data**, especially for horizontal wells.

SDF simplifies competitor and state data analysis alongside internal datasets through Data Manager or through API connection.

Use Case

Using Solo Data Factory, you can now leverage gun barrel plots for rapid competitor production and completion analysis, helping identify optimal landing zones
