

**RealTime**  
Airport

## Complete situational awareness & real-time decision-support platform for airport operations.

Airports run on split-second decisions. With constant pressure to keep everything moving smoothly and efficiently, you're bombarded with fragmented data from countless systems. It's overwhelming trying to stay on top of every flight update, passenger flow, and turnaround process—all while managing disruptions. What if there was a way to break down these silos and bring everything together? A way to see your entire operation in real-time, make faster decisions, and take control of every moment?

RealTime Airport puts you in control with live operational insights and advanced situational awareness. With real-time visibility and an interactive airfield map, you can track aircraft, vehicles, and key assets in motion, synchronising decision-making across all stakeholders. Every landside operational detail is captured, visualised, and optimised to keep your airport running at peak efficiency. Our solution transforms complex airport operations into a fully connected, responsive, and data-driven ecosystem. Because with RealTime Airport, you can break operational silos, and make every second counts.

### Gain complete, real-time situational awareness at a single glance

See your airport like never before. With Airfield Map, watch aircraft and ground movements unfold in real time, with every A-CDM timestamp at your fingertips. Need to keep turnarounds on track? Turn Control gives you the edge. Facing a disruption? Stay ahead with real-time insights that help you act before delays escalate.

From passenger flow to stand assignments, every critical detail is in one place—clear, connected, and always up to date.

### Multisource Operational Data for More Efficient Decision-Making

Imagine having the power to track every flight's progress in real time, filter A-CDM timelines by flight type, airline, and terminal, and spot potential issues before they disrupt your plans. Seamless data integration brings together flight, baggage, and PFM data from multiple sources, providing you with the full operational picture. Generate KPI, passenger, and baggage reports to fine-tune your operations and keep track of what's working—and what's not.

Proactive decision-making. Total operational control.

### Improve your daily operations with automation

With automatic real-time data capture, your team can focus on what truly matters, as information is seamlessly recorded without manual effort, minimizing errors and saving valuable time. Automated actions—whether it's alerts or prioritised data—means your team can respond faster and more effectively. Everyone stays aligned, reducing delays and keeping flights on track.

Automate the everyday. Transform your operations.

## AirportLabs Product Portfolio: Unifying Expertise, Innovation, and Seamless Integration

**Industry Expertise:** Developed by a team with deep aviation industry knowledge.

**Cloud-based Architecture:** Responsive design and accessible across any platform, ensuring seamless functionality anywhere.

**Data Integration:** Effortless integration with any data source or third-party system, backed by automatic data capture.

**Learning Academy:** We offer comprehensive training and adoption resources, such as user guides, training videos and organised workshop sessions that can be provided on-site and remotely throughout the entire life of the product.
