

Blocking ChatGPT Personal

The Problem with ChatGPT

Employees increasingly rely on ChatGPT for work, but using personal accounts can create an easy path for sensitive data exposure. Simply blocking ChatGPT isn't a practical solution—especially for organizations that have invested in ChatGPT Enterprise and want to preserve productivity while still maintaining proper governance, organizational visibility, and the ability to enforce appropriate access and data protection policies.

How dope.security solves for it

Gain visibility and control over ChatGPT without blocking productivity. See who's using it, detect personal accounts, and enforce access with SWG policies and Cloud Application Controls so only approved tenants are allowed.

Shadow IT

Account ID Discovery

SWG Policy

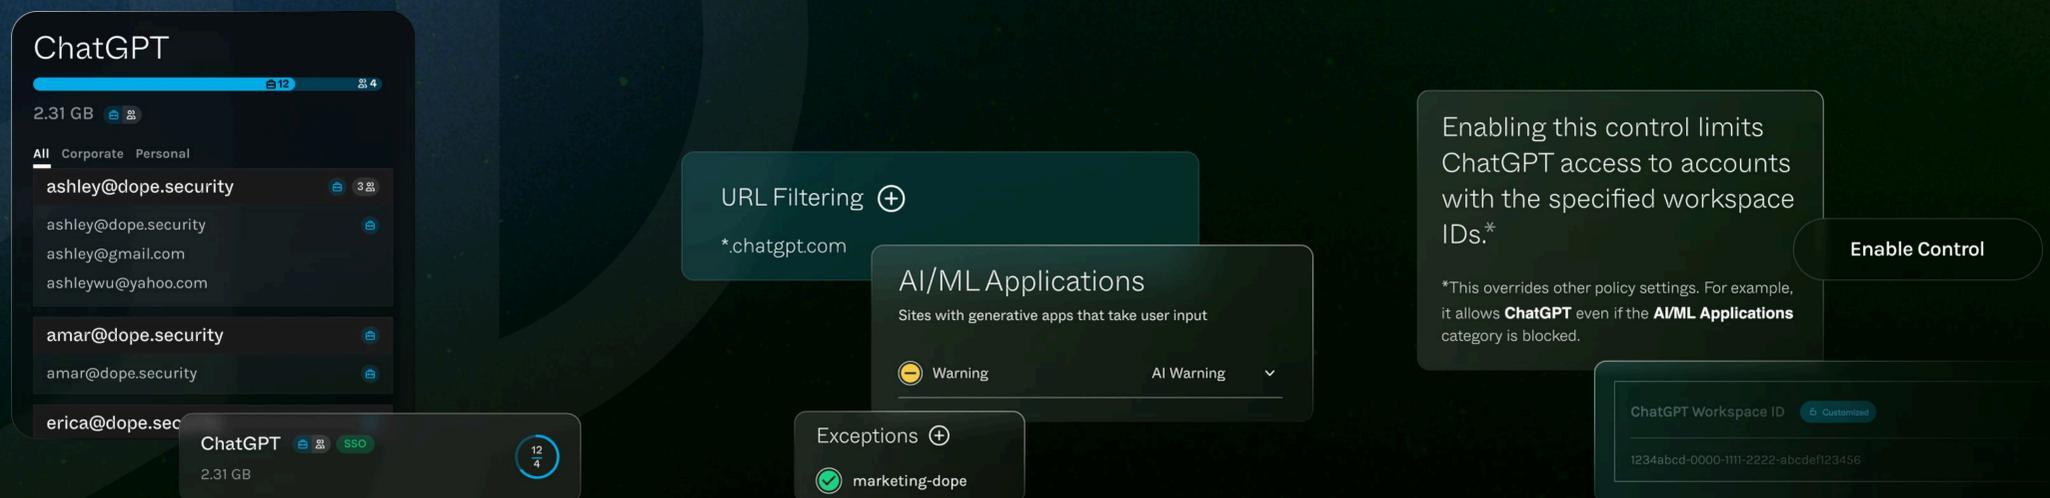

Block, Warn, Allow

CAC Policy

Allow Enterprise Tenant Only

A deeper look at

Shadow IT Discovery + Policy Controls *for* ChatGPT

Shadow IT *Discover*

Detect ChatGPT usage within your organization and identify whether access is via personal or corporate accounts.

ANSWERS YOU GET FAST:

- Who is using ChatGPT (users/domain)
- Usage frequency + trends over time
- Personal vs corporate account usage

SWG Policy *Control*

Block, Warn, or Allow ChatGPT when you configure the AI/ML Application Category or define “chatgpt.com” in custom URL Filtering.

FLEXIBLE CUSTOMIZATION:

- Create specific rules for users or groups as needed
- Customize Block and Warn screens to coach users on policy or sensitive data guidance

Cloud App Control *Restrict*

Permit access only to approved ChatGPT Enterprise workspace IDs while blocking all others, including personal accounts.

CONFIGURE IN 3 STEPS:

- Open Cloud Application Control in your SWG Policy
- Select ChatGPT and Enable Control
- Enter your ChatGPT Workspace ID and hit Save

TO FIND YOUR WORKSPACE ID, GO TO YOUR CHATGPT ENTERPRISE ADMIN SETTINGS → WORKSPACE ID

The result? Simple, enforceable control over ChatGPT usage

- **“Zero-risk productivity”:** keep ChatGPT Enterprise working while blocking personal workspaces.
- **Simple, low-misconfig policy:** turn on in a few clicks; easier to operate without a dedicated team.
- **One control plane:** ChatGPT governed alongside other SaaS apps in the CAC rulebook
