

Software Testing Ownership Model

Prepared By Moolya

Prepared for Hotstar

October 2022

Client Introduction

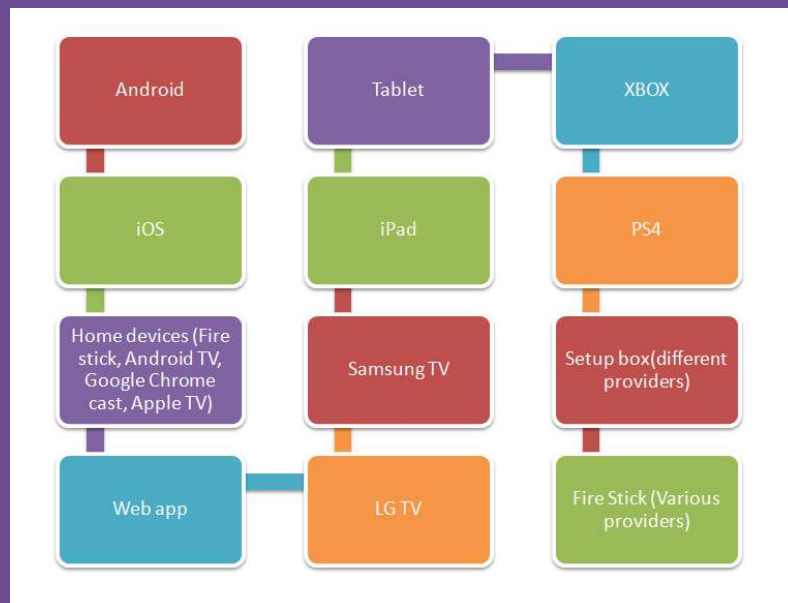

Disney+ Hotstar is leading the way as the largest and smartest video platform in the country, reaching over 300 million users today. They have set a number of world records along the way - including the highest concurrent viewership at 25.3 million during the ICC Cricket World Cup 2019. Disney+ Hotstar today is the one-stop destination for all our entertainment needs - from Live Sports, Indian and International Shows, and Movies to all Disney content, including Pixar, Marvel, Star Wars, National Geographic, and Disney+ Originals. They are looking for the brightest minds to build the future of TV with us.

They believe there are only two ways to realize their goals – by daring or daring more.

Test Scope

Platform Coverage

Client Expectations

- Ownership of the given platform to a tester
- Can run the thread individually and religiously follow their severity and priority definition to get it resolved
- To maintain documentation
- To send weekly and daily status reports & Bug reports
- Moolya teams to focus on the new releases and maintenance, making sure things don't break in the production for both existing and the new architecture
- The team should understand the basics of debugging
- Should understand the usage of Charles proxy to log issues, ADB logcat logs for bug reporting
- Team to be smart enough to pick up tools and provide details to the developer to fix it

Challenges

- Ad-Hoc requests on Sanity tasks, Device manager executions & Rocky Executions.
- Lack of process set up
- Tasks were not organised/sorted based on priority

Moolya Value Addition

- To assess every ad-hoc request in terms of risk, complexity, and urgency
- Streamline the QA processes
- Defined criticality and priority of tasks
- Bring in strong automation culture and confidence in release cycles
- Feedback loops for improving the product quality

Product Updates At Moolya

At Bugasura, We look at user feedback and reviews to provide pure value and serve them the best we can.

We found out that our users were having trouble with Jira sync. And last week's sprint was all about it.

We got this **Big Big Jira Update** for you !

Bugasura and Jira are now in complete sync

Mapping Fields: Map both the system and custom fields between Bugasura and Jira.

Auto push: Sync all issues in one click

Pull feature: Changes made to issue details inside Jira, will also reflect in Bugasura.

Auto-sync: Issue details, comments, and attachments are all synced automatically when an already synced issue is changed.

Collibra

Each team and every business we work with comes with its own challenges and their own story. One such story in the making as we post this is our journey with **Collibra**. Collibra is a data intelligence and data governance company based in **New York, USA**. They aim to “**make data meaningful**” and ease out complex data management.

Collibra is a leading provider of data governance solutions, helping organizations manage their data assets effectively. The company's solutions enable businesses to understand their data, ensure its quality, and maintain compliance with various regulations. Collibra's platform is designed to be scalable and flexible, allowing organizations to integrate it with their existing data systems. The company's focus is on providing a comprehensive suite of tools that cover the entire data lifecycle, from data discovery to data retirement. Collibra's solutions are used by a wide range of industries, including financial services, healthcare, and retail. The company's commitment to innovation and customer success has made it a leader in the data governance market.
