○ icetana AI

○ FACIAL RECOGNITION

Identify individuals instantly with facial recognition

ABOUT

Integrate icetana Facial Recognition into our Safety and Security solution to immediately recognise any individual from your VIP or banned list as they enter or leave your premises.

HIGHLIGHTS

HIGH
Accuracy rate

REAL TIME
Facial recognition

INTEGRATES
With your existing camera and VMS systems

CHALLENGES ⌄

Without facial recognition software, efficiently identifying or verifying individuals can be difficult, impacting security and operational processes. This challenge is clear when trying to monitor VIP or banned people in real time.

Real time watchlists

Monitoring people of interest

VIP or banned person on site

SOLUTION ⌄

Easily manage access lists and detect when a person of interest enters your site with a straightforward four-step setup.

1 **Create personalised watchlists**
With either allow or deny to your premises.

2 **Upload images of people and add them to relevant watchlist**

3 **Enter person details and upload additional images of the person**
If you possess multiple images of the person, you can upload all of them.

4 **Option to configure different Livewall's with different lists**
Receive distinct alerts for allow and deny watchlists to stay informed when someone enters your site.

icetana AI

BENEFITS ⌄

1 Quick to set up
No need to spend hours setting up our facial recognition system.

2 Have multiple images for the same person
You aren't limited to one image per person; you can upload multiple.

3 Instant alert of person to Livewall
An alert appears on the icetana Livewall when a person from your allow or deny list enters your site.

4 High Accuracy
High accuracy working on all.

USE CASES ⌄

VIP detection (Loyalty Perks)
Identify high-profile visitors to provide personalised services and enhance their customer experience.

Monitor person of interest
Monitor when a person of interest enters your site while tracking their movements.

Access control
Only allowed persons to enter restricted areas, for example, control rooms or bank vaults.

Banned person enters site
Identify when a banned person enters your site in real time, allowing you to take immediate action.
