

# **GPT SOFTWARE**

*Identify any event you're interested in without custom algorithms.*

## ABOUT

Integrate icetana GPT with our Safety and Security solution to search for any event by entering a text description, alerting you in real time when the event occurs. Additionally, it offers automated reporting capabilities that do not require internet access, perfect if you are on a dark site.

## HIGHLIGHTS

### REAL TIME

Detection instant from installation

### INTEGRATES

With your existing camera and VMS systems

## CHALLENGES

Different security environments have diverse requirements, making it challenging to detect specific incidents in real time. Each unique security challenge complicates monitoring your screens effectively, potentially causing you to miss significant security threats.

**Unique security challenges**

**Automated reporting**

**Missing key events**

## SOLUTION

Easily identify specific events customised to your requirements in real time, without any need for icetana development. Once installed, icetana GPT initiates a straightforward three-step process.

1

**Click to create a new GPT prompt**

2

**Enter the event type you are looking for**

Input the specific security events you wish to monitor, which could vary from detecting a person with a knife to the presence of medical emergency services onsite.

3

**Events will appear on your Livewall**

After you input your specific events, they will appear on your Livewall instantly in real time.

## BENEFITS

1

### No internet access is required

icetana GPT operates on servers rather than the internet, making it ideal for dark sites.

2

### Find custom events with simple text entry

Every site is unique and has specific security requirements, enabling you to identify and monitor custom events tailored to your needs.

3

### Starts working immediately

After installation, icetana GPT analyses your camera feeds and displays your custom events in real time.

4

### No specialist cameras

There is no need for you to upgrade your cameras, icetana GPT is compatible with a wide variety of camera models.

## USE CASES

### Text-based event detection

Discover a broad spectrum of events by describing them, allowing our local GPT to locate them. Examples may include:

**Person with knife**

**Wheelchair**

**Medical or police vehicle**

**Medical or police personnel**

**Fighting**

**Car crash or car incident**

**Vandalism or graffiti**

**Damage to Property**

### Automated reporting

Use our local GPT to describe the events occurring in your video.

someone carrying a very large bag

someone has fallen over

someone carrying something that could be used as a weapon

someone is in a mobility scooter

someone wearing a hoodie

a dog
