

FORENSIC QUICK FIND

Locate individuals of interest across all sites in real time

ABOUT

Integrate icetana Forensic Quick Find with our Safety and Security solution to find persons of interest across your site in seconds.

icetana's Forensic Quick Find overcomes traditional surveillance limitations, enabling quick identification of a person of interest across all cameras by detecting similarities to your subject.

HIGHLIGHTS

SELF LEARNING

No need to spend hours inputting rules

REAL TIME

Find people in seconds

SCALABLE

For 1000's of cameras

INTEGRATES

With your existing camera and VMS systems

CHALLENGES

Tracking a person of interest through various cameras is a complex task, especially during a crisis when searching across all cameras can waste hours. Reviewing extensive VMS footage to locate the individual adds to the challenge.

Locating individuals in real time

Evidence Collection

Hours of footage

SOLUTION

Quickly find a person based on an icetana event, see where they have been and where they were last seen. Once installed, the user can follow this simple 3-step process to get started.

1

Find the person of interest in the Highlights

Once a security event is logged in the Highlights module and the person of interest is detected, hover your mouse over them.

2

Click on person

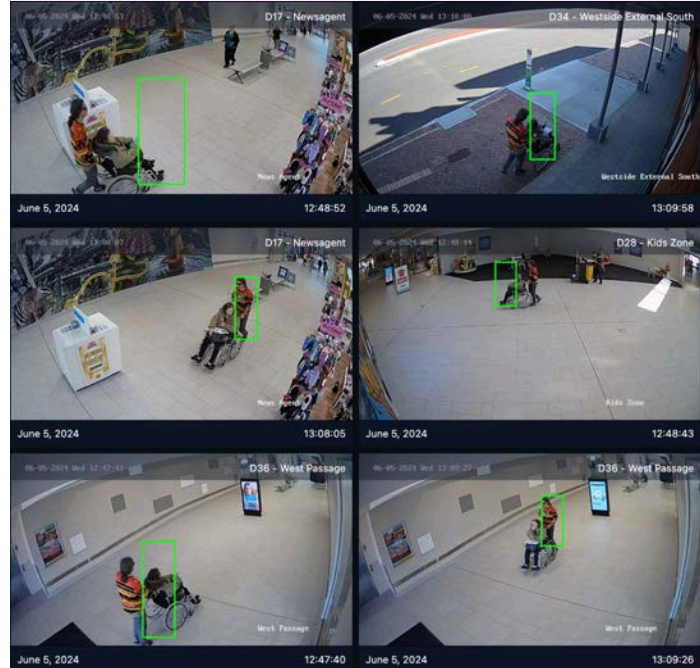

When the individual is highlighted, click on their body to be redirected to the Find page.

3

Review their footsteps at your site

icetana scans all the cameras on your site for individuals resembling your subject prioritising the most similar matches at the top.

BENEFITS

1

Fast with no configuration

There is no need for special configuration or rule setting.

2

Track across multiple cameras

Identify the individual's footsteps.

3

No need to enter metadata

There is no requirement to enter metadata, click on the individual and find them in real time.

4

Works on all cameras

Integrates and works on your current camera set-up with no need to have specialist 4K cameras.

USE CASES

An icetana event needs to be created before you can utilise the icetana Forensic Quick Find. Here are some use case examples only if an event is triggered.

A person of interest

Instantly locate a person of interest when an event has been spotted.

Evidence collection

Gather clear, actionable video evidence from multiple angles and locations.

Theft prevention & response

Follow and track thieves across multiple cameras, enabling security teams to quickly identify suspects and recover stolen goods.

Post-event analysis

Review and understand the sequence of events leading up to incidents, helping in decision-making for the future.

Unauthorised access monitoring

Track people who have entered restricted areas.
