

Streamlining and Troubleshooting our SUSHI Harvesting with Celus:

How the Platform Improved our Usage Tracking

Betsy Tucker
Electronic Resources Librarian, Kansas State University

What is Celus??

- SUSHI harvesting software
- Supports COUNTER R4, R5, and R5.1 reports, as well as parsing data from select non-COUNTER compliant vendors: Kanopy, Naxos, Chronicle of Higher Ed, etc.
- Once data is ingested, it can be used to create spreadsheets, graphs, and custom views.
- Also organizes SUSHI credentials and makes it easier to track when credentials break.

Celus at K-State

- Implemented June 2024.
- SUSHI harvesting set up for 97 COUNTER R5 vendors
- Manual harvesting done monthly for 1 COUNTER R4 and 6 non-COUNTER compliant vendors

SUSHI Audit Steps

1. Load a list of vendors with available SUSHI. I pulled mine from Ex Libris, but Celus and the COUNTER registry also have lists.

2. Use your ILS/LMS/ERM software (K-State has Alma) to figure out which vendors your library has active subscriptions to and whether SUSHI has been set up for them. (If you are harvesting to multiple sources, as we do, you may need to cross-check.)

3. Add any missing SUSHI credentials to your harvesting software of choice.

Results

- Fixed 16 broken credentials
- Added 25 new credentials
- Made significant progress towards department goal of having SUSHI for every available vendor
- Allowed our Content Development department to assess statistics for every renewal with available COUNTER data and a few that are not COUNTER compliant through Celus.

35	NewBank (Readex)	Yes	Broken SUSHI	Yes	
37	OSCO Library	No SUSHI	No SUSHI	Yes

Assn. in Celus; Society everywhere else. Ex Libris lists two SUSHI providers; we have Scholarly IQ, not Silverchair
