### **FASTSTUDENT**

---

#### **Case: 63148 Timetable - Modified filter Instructors to be a Multi-Search Box**

Modified the Instructor filter on the Course Info -> Timetable screen to be a Multi-Search style filter.

#### **Case: 63186 Institutional Definitions: Number Values incorrectly processed as text**

When student institutional definitions were created specifying that the student needed to be enrolled in a certain number of credits, the numbers were getting processed as text and incorrect values were returned.

#### **Case: 63189 Student AR Invoice Summary Report: Add Prior Invoice Info**

These columns have been added in 'Deselected' or 'Hidden' mode. You can adjust whether new columns and/or filters are added/enabled via the Administration tab of the report. Additional information regarding the data contained in these columns can be found in the "Tooltips" column of the Data Grid Columns section of the Administration tab, or by hovering over the column title within the report.

Prev Invoice Number  
Prev Invoice Statement Date  
Prev Invoice Total Charges  
Prev Due Date  
Prev Invoice Total Payments  
Prev Invoice Total Amt  
Prev Invoice Balance

#### **Case: 63213 Course Planning: Issue copying Forecast to new Course Plan**

Prior to this release, the following error might occur:

If a course plan is created with no instructor assigned (pidm = -1 and name is TBD) and faculty related information has been entered for the course AND the faculty related information is different for a specific term, in the following scenario, an error would occur:

- 1) Copy course plan records to a forecast including those identified above
- 2) Copy forecast records (including those identified above) back to a new course plan.

The error message was that the primary key was violated.

This issue has been resolved.

#### **Case: 63594 Course Planning: First Start Date issue**

In certain circumstances, the Edit Course Plans page was not showing the earliest course start date in situations where multiple course start dates were associated with the course. In order to fix the issue, we had to remove the option to show 'TBD' when no date existed as the field is expecting a date and 'TBD' is not a date.

---

### **Global Changes That Affect All Applications**

---

#### **Case: 62056 Pinned Report Admin Page: Add hyperlink to pinned report from page**

Added a new "Menu Path" column to the Pinned Reports administration screen. The column is also hyperlinked to drill down to the specified pinned report (if the user has access to that pinned report).

#### **Case: 62943 Admin Tab: Control width option to data entry section**

On the page level Administration tab under the Data Grid Entry Columns section, renamed the existing "Width" column to be "Column Width" and added a new column "Control Width" (allowing, for example, the width of an associated dropdown list or search results to differ from the width of the underlying column).

#### **Case: 63434 Percentage columns on data entry grids**

When clicking into a data entry cell that is a numeric textbox type with format set to percent, the cell had "50%" before click and "50 %" after click, which caused the cell to become yellow when nothing actually changed. We have fixed this so the space between the number and the symbol does not get added when clicking into the cell anymore.

#### **SYS. REQ. Minimum Server Requirements**

DATABASE: Oracle 19c      WEBSERVER: Windows Server 2019, IIS 10, .NET Framework 4.7.2
