Case: 61880 Position Budget Transfers: Ability to AutoLock records generated by position transfers

A new configuration setting and a new security role have been added to support the locking of position budget transfer transaction records prior to being approved and finalized as a transfer.

Configuration Setting 1600 - Allow editing of Budget Transfer records created from Position changes. Y/N. An 'N' in this setting allows editing of position budget transfer records. A 'Y' in this setting will prevent editing of position budget transfer records. Please note that even if the transaction rows are locked, it does not prevent the insert of new records on the page.

Security Role - A new security role (BUDGET_UPDATEPOSITION) has been added to allow people in that role to edit position budget transfer records when the configuration setting 1600 = Y.

Case: 63577 Compare Bud to Dev Report: Add FOAPAL Descriptions

Added FOAPAL Title columns to Compare Bud to Dev report.

Case: 63578 Compare Dev Series report: Add FOAPAL Descriptions

Added FOAPAL Title columns to Compare Dev Series report.

Case: 64134 Budget Development: Add columns

An optional data enterable Suffix column has been added to the Budget Development Entry page.

A non-data enterable employee class description has also been added in hidden mode.

Note: This case only adds the suffix column to the data entry page and does not add it to the import process or copy functionality. Those will be handled in another case.

Case: 64228 Benefit Maintenance: Required columns not marked mandatory

The following columns are required but were not marked as mandatory on the data entry page, leading to confusion when entering data:

Description
Burden %
Effective Year

These columns have been changed to mandatory so that they must be populated in order to save records.

Case: 64297 Position Records - Unable to delete records

If the Posted to ERP indicator = 'N' then distribution records should always be allowed to be deleted, even if child records exist (the associated child records will be deleted first and then selected record after).
