
FASTFINANCE

Case: 65468 Date Format on Transaction Detail does not respect format set on Page Administration

Fixed a minor display issue on the Transaction Detail report where the date format set with / as separators (ex. MM/DD/YYYY or DD/MM/YYYY etc) might display with - as separators (ex. MM-DD-YYYY or DD-MM-YYYY) or vice versa.

Case: 66088 Data refresh for SaaS Banner

Updates to prepare our data refresh process to better support Banner SaaS.

Global Changes That Affect All Applications

Case: 63547 Banner Saas to FAST integration

Updates to support Banner SaaS. Certain places across the system where we previously had live calls to Banner have now been changed to reference the Portal data warehouse (which typically runs every hour, compared to reporting applications which only run once overnight).

Case: 65961 Notifications when Hung Job is detected

For clients hosted in the Millennium Cloud: Added the ability to send email notifications to the appropriate personnel (defined in configuration setting #700 under each application) when a refresh job is detected as stuck/hung and is terminated.

Case: 66187 Query Builder - Fails when decimals past 28 precision exist

Fixed a problem when a column returned by a query was a repeating decimal (ex. $1/3 = 0.33333333333333333333333333333333$) with more than 28 digits of precision. The system will now automatically truncate the value down to 28 digits, preventing an error message, and preventing the user from needing to manually round or truncate it themselves.

SYS. REQ. Minimum Server Requirements

DATABASE: Oracle 19c WEBSERVER: Windows Server 2019, IIS 10, .NET Framework 4.7.2
