

Vulnerability Consultation

Identify vulnerabilities in your systems and get expert guidance to prioritise and remediate.

What is it?

This hands-on workshop focuses on identifying and prioritising vulnerabilities across your systems and applications. We evaluate your infrastructure against CIS benchmarks and provide expert remediation advice.

Why we offer this workshop

New vulnerabilities emerge daily – and not all carry equal risk. We run this workshop to help you focus remediation efforts where they matter most.

Key outcomes

- In-depth infrastructure and application scan.
- Secure build review against CIS standards.
- Prioritised risk-based patching guidance.
- Practical remediation support from experts.
- Clear documentation for audit or board reporting.

What to expect

Pre-workshop discovery session

Vulnerability scans across environment

Review against secure build benchmarks

Walkthrough of results and recommendations

Final report with next-step actions
