DATACENTRE & CLOUD

Ransomware Recovery Workshop

Test your ability to recover from ransomware before you're forced to.

What is it?

Ransomware is a growing threat – and the difference between recovery and catastrophe lies in preparation. This workshop provides a clear, structured assessment of your current recoverability posture and identifies the critical gaps you need to address.

Why we offer this workshop

We offer this workshop to help organisations validate their backup and recovery defences against today's most aggressive attack scenarios. It's a proactive step toward resilience, not just response.

Key outcomes

- Identify vulnerabilities in your current backup systems.

- Assess snapshot, immutability and MFA configurations.

- Validate offsite and air-gapped recovery capabilities.

- Get up to speed with the latest backup features.

- Receive a clear action plan to improve recoverability.

What to expect

Scoping session to understand your environment	Review of your backup & snapshot configs	Check for immutability, MFA & offsite protections	Analysis of unused backup security features	Clear action plan to strengthen recoverability
