DATACENTRE & CLOUD

Disaster Recovery Workshop

Align your recovery capabilities with what your business truly needs.

? What is it?

Your disaster recovery strategy is only effective if it matches your actual business needs and platform capabilities. This workshop aligns your recovery point and recovery time objectives (RPO/RTO) with real-world infrastructure performance - and closes the gaps.

Why we offer this workshop

We offer this workshop because we've noticed many of our customers assume they're protected, without verifying if their systems can meet their Disaster Recovery (DR) expectations. We help turn assumptions into clarity.

Key outcomes

- Identify critical gaps between expectation and DR capability.

- Map real RPO/RTO timelines to business processes.

- Discover cost-effective DR improvements.

- Understand cloud DR and hybrid recovery options.

- Build confidence in your ability to bounce back.

What to expect

✓	✓	✓	✓	✓
Session to map key business systems	Review of your current CR setup	Comparison of RPO/RTO targets & actual capability	Gap analysis of risks and limitations	Roadmap to improve disaster recovery outcomes
