

MySunrise SACT treatment pathway in cancer care

SACT = Systemic Anti-Cancer Therapy

Includes chemotherapy, immunotherapy, hormone therapies and targeted/biological therapies

The pathway explained

1

A diagnosis of cancer

Determining the type you have

2

Your first appointment

Discuss treatment and give consent

3

Preparing for treatment

Getting ready for what's ahead

4

Tests you might receive

From blood tests to further scans

5

Receiving treatment

Hospital or at home treatment

6

Feeling unwell on treatment?

Side effects and how to manage them.

7

Support after treatment

Survivorship and ongoing care

Scan the QR code or click the box to access more information about each stage of the SACT pathway
