

Reporting with Power BI – Introduction and Training

Motivation

Power BI is a versatile data visualization tool that allows you to visualize your data, share insights across your organization, and embed them in your app or website. It simplifies publication and distribution features and connects with other Microsoft products and services.

Power BI is part of Microsoft's robust commercial software heritage and has proven to be a reliable and effective tool for business intelligence. Microsoft is considered as the leading Analytics and Business Intelligence Platform¹. Power BI has now been integrated into the Microsoft Fabric Platform².

What we bring

As a Microsoft certified partner, PRODYNA leverages extensive M365 experience to help you design and develop Microsoft-based solutions.

With this offering, we will assist you with:

- Get an overview about Fabric and Power BI
- Determining the appropriate licenses
- Setup required infrastructure and services
- Enable your employees to develop Power BI based solutions

What you need

This service presumes that you are already utilizing M365 Office applications and have a configured M365 tenant. If this is not the case, we can assist you in preparing accordingly.

Benefits

- Full cloud-based document management system
- Customized solution and comprehensive UI
- Integration of other solutions
- Adaptable to legal aspects

Quick facts

- Duration: 3–5 weeks
- Customization to your individual needs
- Fast implementation to get ready due to best practices
- Enabling a secure cloud based DMS solution

What you get

PRODYNA will guide you and your employees through the adoption process in the following phases:

PHASE	ACTIONS
Introduction to Power BI & Fabric (1 day)	Get a high-level overview about all features of Microsoft Fabric including Power BI.
Is-Analysis & Target Definition (1 day)	Determine the core data sources that should be used for reporting. Analyze if native Power BI features are sufficient or additional advanced Fabric features are needed for your use cases and buy appropriate licenses.
Central Admin Configuration (1 day)	Centrally enable or disable features depending on your needs globally or only for selected users, for example to prevent oversharing and uncontrolled growth.
User Training (2 days)	Learn how to load data into Power BI and prepare it for reporting. Add calculations and measures to your semantic model and visualize your data. Share your reports, set permissions and configure automatic refresh.
Support (10 days)	Get on demand help during your first steps.
Optional: Gateway Installation & Configuration (4 hours)	Installation and configuration of a gateway server to access local data. Optionally, this can be extended to a high available cluster.

Note: This is our standard methodology. We are happy to modify and adapt to the specific needs of your organization, for example if your data sources are unsuitable to be directly imported into Power BI or if a use case requires advanced AI based analysis.
