# Tall Rotating Cone Rope Climber

## Materials & Construction

| |
|---|
| **Structure:** Galvanised, powder-coated steel central post and large ring |
| **Climbing nets:** Upper and lower nets in 16 mm diameter rope |
| **Connectors:** Plastic rope connectors at the net junctions |
| **Movement:** The net structure rotates around the central post |

**With a free-fall height of 2.00 m, impact-absorbing surfacing to EN 1177 is required across the whole safety zone — for example wetpour or bonded rubber mulch tested to this height, or loose-fill at 300 mm depth. We'll recommend the right finish for your site.**

*Images are computer visualisations; the installed product will look similar. Colours may vary from those shown.*

## How to Use

### Rotating cone

Children climb the upper and lower nets while the cone turns around the central post. Climbers move round with it and can work together to keep it turning.

**Benefits:**

Builds grip strength, balance and coordination, and gets children cooperating to keep it turning.

## Inspection & Maintenance

Routine visual check weekly (daily on busy or vandal-prone sites), an operational check every 1–3 months and a main inspection once a year. Check rope tension, connectors and anchors at each operational check, and replace worn or damaged parts promptly with genuine spares. Morti Sport & Play offers annual inspection and maintenance for school and public sites.

## Why Choose This Product

A tall rope cone that turns as children climb, adding movement to a climbing zone on a compact base. Upper and lower nets give routes for both younger and more confident climbers.

- Climbing and spinning in one unit on a 2.15 m base
- Galvanised, powder-coated steel with 16 mm rope nets
- Certified to BS EN 1176
- Designed, supplied and installed by Morti Sport & Play's own teams
