Robinia Low Horizontal Scramble Net

Materials & Construction

Posts & beams: Robinia hardwood: four short posts carrying two log beams
Net: Horizontal rope net stretched between the beams
Foundations: Posts set in the ground with about 25 kg of concrete per hole; parts are predrilled
Handling: Largest single part 2.0 m long and about 22 kg

With a free-fall height of just 0.4 m, BS EN 1176-1 allows this net to sit on grass or turf, or on any EN 1177 impact-absorbing surface. We'll recommend the right finish for your site.

Images are computer visualisations; the installed product will look similar. Colours may vary from those shown.

How to Use

Crawl across

Children crawl across the net on hands and knees, finding their footing between the rope squares.

Benefits:

Coordination, core strength and spatial awareness.

Scramble over

Older children step or scramble across the net and over the log beams as part of a trail.

Benefits:

Balance, agility and confidence.

Inspection & Maintenance

Routine visual check weekly (daily on busy or vandal-prone sites), an operational check every 1–3 months and a main inspection once a year. Check the net tension, rope ends and fixings, look for split timber at the posts and keep the ground under the net level. Morti Sport & Play offers annual inspection and maintenance for school and public sites.

Why Choose This Product

A low Robinia trail element: a horizontal rope net stretched between two log beams just 0.4 m off the ground. It gives the youngest children a first climbing and crawling challenge and works on its own or as one station in a longer trim trail.

- Low 0.4 m free-fall height, so it can go straight onto grass
- Suitable from age 2+
- Compact 2.0 x 1.9 m footprint; adds easily to an existing trail
- Designed, supplied and installed by Morti Sport & Play's own teams
