Robinia Parkour Climbing Forest

Materials & Construction

Posts: Seven Robinia posts with carved footholds, set at angles; longest part 3.0 m

Foundations: Posts set in concrete, 25 kg per hole; not pre-drilled

Weight & install: 210 kg in total, heaviest part 30 kg; about 4 hours for 2 installers

Free-fall height is 2.10 m, so the whole 26 m^2 safety zone needs impact-absorbing surfacing: EN 1177 synthetic surfacing tested to 2.1 m, or 400 mm of bark, woodchip, sand or gravel. Grass is not suitable. We'll recommend the right finish for your site.

Images are computer visualisations; the installed product will look similar. Colours may vary from those shown.

How to Use

Climbing forest

Climb each post using the carved footholds and move from post to post without touching the ground. Set routes and challenges, such as a full circuit or a race to the top.

Benefits:

Builds grip, leg and upper-body strength, balance and coordination, and teaches children to plan routes and judge distances.

Inspection & Maintenance

Routine visual check weekly (daily on busy or vandal-prone sites), an operational check every 1–3 months and a main inspection once a year. Check the posts for splits, loose or worn footholds and soundness at ground level, and keep the loose-fill surfacing topped up and level. Replace damaged posts promptly. Morti Sport & Play offers annual inspection and maintenance for school and public sites.

Why Choose This Product

A cluster of angled Robinia posts that turns climbing into a parkour challenge. There is no set route, so children create their own, and the natural timber suits parks, school grounds and natural play areas.

- Seven Robinia climbing posts with carved footholds
- Open-ended routes for children aged 5 and over
- Small 26 m^2 safety zone for a climbing feature
- Designed, supplied and installed by Morti Sport & Play's own teams
