Compact Rotating Cone Rope Climber

Materials & Construction

Structure: Galvanised, powder-coated steel central post and large ring
Climbing nets: Upper and lower nets in 16 mm diameter rope
Connectors: Plastic rope connectors at the net junctions
Movement: The net structure rotates around the central post

With a free-fall height of 1.29 m, impact-absorbing surfacing to EN 1177 is required across the whole safety zone — for example wetpour or bonded rubber mulch tested to this height, or loose-fill at 300 mm depth. We'll recommend the right finish for your site.

How to Use

Rotating cone

Children climb the upper and lower nets while the cone turns around the central post, moving round with it as they climb.

Benefits:

Builds grip strength, balance and coordination, and encourages turn-taking and cooperation.

Inspection & Maintenance

Routine visual check weekly (daily on busy or vandal-prone sites), an operational check every 1–3 months and a main inspection once a year. Check rope tension, connectors and anchors at each operational check, and replace worn or damaged parts promptly with genuine spares. Morti Sport & Play offers annual inspection and maintenance for school and public sites.

Why Choose This Product

A compact rope cone that spins as children climb, bringing movement to a climbing zone on a 1.58 m base. A good fit for smaller school and community sites.

- Climbing and spinning in one unit on a very small base
- Galvanised, powder-coated steel with 16 mm rope nets
- Certified to BS EN 1176
- Designed, supplied and installed by Morti Sport & Play's own teams
