Rotating Cone Rope Climber with Platform

Materials & Construction

Structure: Galvanised, powder-coated steel central post, large ring and platform
Climbing nets: Upper, middle and lower nets in 16 mm diameter rope
Connectors: Plastic rope connectors at the net junctions
Movement: The net structure rotates around the central post

With a free-fall height of 1.98 m, impact-absorbing surfacing to EN 1177 is required across the whole safety zone — for example wetpour or bonded rubber mulch tested to this height, or loose-fill at 300 mm depth. We'll recommend the right finish for your site.

Images are computer visualisations; the installed product will look similar. Colours may vary from those shown.

How to Use

Platform cone

Children step on to the round platform, then climb the upper, middle and lower nets as the cone turns around the central post.

Benefits:

Builds grip strength, balance and coordination; the platform gives younger children an easy way on.

Inspection & Maintenance

Routine visual check weekly (daily on busy or vandal-prone sites), an operational check every 1–3 months and a main inspection once a year. Check rope tension, connectors and anchors at each operational check, and replace worn or damaged parts promptly with genuine spares. Morti Sport & Play offers annual inspection and maintenance for school and public sites.

Why Choose This Product

A rotating rope cone built on a round platform, so children can stand on the platform or climb the nets as the cone turns. Three net levels give routes for every stage, from first-time climbers upwards.

- Platform, three net levels and rotation in one compact unit
- Galvanised, powder-coated steel with 16 mm rope nets
- Certified to BS EN 1176
- Designed, supplied and installed by Morti Sport & Play's own teams
