Stainless Steel Four-Tower Play Unit

Materials & Construction

Structure: Stainless steel; posts finished with ball tops
Slides: Two stainless steel slides with stainless handrails
Platforms: HPL with a non-slip texture
Panels: HDPE roofs, entrance ramp, slide sides, climbing walls, bridge wheels and porthole panels

With a free-fall height of 2.50 m, impact-absorbing surfacing to EN 1177 is required across the whole safety zone — for example wetpour or bonded rubber mulch tested to this height, or loose-fill at 400 mm depth. We'll recommend the right finish for your site.

How to Use

Towers & bridges

Children climb into four towers by seven ladders, a spiral ladder, a rope ramp and climbing walls, and cross between them on two bridges of suspended wheels.

Benefits:

Builds climbing strength, balance and coordination.

Slides & fire pole

Children leave by either of the two stainless steel slides or the fire pole.

Benefits:

Spreads groups across the unit and keeps play flowing.

Inspection & Maintenance

Routine visual check weekly (daily on busy or vandal-prone sites), an operational check every 1–3 months and a main inspection once a year. Check fixings, chains, nets and moving parts at each operational check, and replace worn or damaged parts promptly with genuine spares. Morti Sport & Play offers annual inspection and maintenance for school and public sites.

Why Choose This Product

Our largest stainless steel play unit: four towers, two with roofs, linked by two wheel bridges, with twin slides and many routes up — built for busy parks and large school playgrounds.

- Stainless steel structure with HPL platforms and HDPE panels
- Twenty-four users across four towers, two bridges and two slides
- Certified to BS EN 1176
- Designed, supplied and installed by Morti Sport & Play's own teams
