Stainless Steel Two-Tower Play Unit

Materials & Construction

Structure: Welded stainless steel AISI 304, no clamps; Ø76.1, 33.7 and 25.0 x 2.0 mm tube, 40 x 40 x 2.0 mm profiles
Slide: Stainless steel
Platforms: 10 mm HPL with a non-slip texture
Panels: 15 mm three-layer coloured HDPE for slide sides, towers and balustrades

With a free-fall height of 2.50 m, impact-absorbing surfacing to EN 1177 is required across the whole safety zone — for example wetpour or bonded rubber mulch tested to this height, or loose-fill at 400 mm depth. We'll recommend the right finish for your site.

How to Use

Towers & bridge

Children climb into the two towers by ladders and the climbing wall, and cross between them on the bridge of four wheels.

Benefits:

Builds climbing strength, balance and coordination.

Slide & pole

Children leave by the stainless steel slide or the straight pole.

Benefits:

Adds speed and choice to the route.

Inspection & Maintenance

Routine visual check weekly (daily on busy or vandal-prone sites), an operational check every 1–3 months and a main inspection once a year. Check fixings, chains, nets and moving parts at each operational check, and replace worn or damaged parts promptly with genuine spares. Morti Sport & Play offers annual inspection and maintenance for school and public sites.

Why Choose This Product

A compact stainless steel play unit with two roofed towers linked by a wheel bridge, a slide and a climbing wall — the smallest unit in the range for school playgrounds and parks.

- Welded stainless steel AISI 304 structure
- Twelve users on a 6.76 x 3.59 m footprint
- Certified to BS EN 1176
- Designed, supplied and installed by Morti Sport & Play's own teams
