Stainless Steel Three-Tower Play Unit

Materials & Construction

Structure: Stainless steel; posts finished with ball tops
Slide: Stainless steel bed and handrails
Platforms: HPL with a non-slip texture
Panels: HDPE roofs, entrance ramp, slide sides, climbing walls, bridge wheels and porthole panels

With a free-fall height of 2.50 m, impact-absorbing surfacing to EN 1177 is required across the whole safety zone — for example wetpour or bonded rubber mulch tested to this height, or loose-fill at 400 mm depth. We'll recommend the right finish for your site.

Images are computer visualisations; the installed product will look similar. Colours may vary from those shown.

How to Use

Towers & bridge

Children climb into three towers by ladders, a spiral ladder, a rope ramp and climbing walls, and cross between two of them on a bridge of suspended wheels.

Benefits:

Builds climbing strength, balance and coordination.

Slide & fire poles

Children leave by the stainless steel slide or the two fire poles.

Benefits:

Adds speed and choice, keeping children moving round the unit.

Inspection & Maintenance

Routine visual check weekly (daily on busy or vandal-prone sites), an operational check every 1–3 months and a main inspection once a year. Check fixings, chains, nets and moving parts at each operational check, and replace worn or damaged parts promptly with genuine spares. Morti Sport & Play offers annual inspection and maintenance for school and public sites.

Why Choose This Product

A long, colourful stainless steel play unit with three towers — two with roofs — linked by a wheel bridge, with many ways up and down for groups of children.

- Stainless steel structure with HPL platforms and HDPE panels
- Twenty users across three towers, a bridge, climbing walls and a slide
- Certified to BS EN 1176
- Designed, supplied and installed by Morti Sport & Play's own teams
