Compact Kicker Skate Park

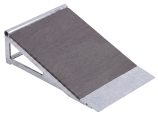

Pre-designed modular skate park | 5 modules

Modules Included

Bank Ramp 900 with Handrail
MSP213BJJ

Bank Jump Ramp 600
MSP231BJJ

Two-Level Manual Pad
MSP441BJJ

Progressive Grind Rail 5 m
MSP453BJJ

Quarter Ramp 900 with Handrail
MSP113BJJ

Technical Data

Minimum recommended area (L x W)

22.8 x 7.8 m

Area

178 m²

5 modules · Recommended age 12+ · Skateboards, inline skates, BMX and scooters

Conforms to: EN 14974 (skatepark facilities)

About This Layout

A ready-designed skate park of five modules: a 0.9 m quarter and a 0.9 m bank with railed decks at each end, with a bank jump kicker, a two-level manual pad and a 5 m progressive grind rail in the middle. Riders build speed off the transitions, launch from the kicker, and progress on the stepped manual pad and the sloping rail, which start low and get harder as confidence grows. It needs a minimum area of 22.8 x 7.8 m (178 m²), making it the most compact of our multi-module layouts.

Materials & Construction

Structure: Robust metal structure in 40 x 40 x 2 mm or 80 x 40 x 2 mm tubular steel profiles (depending on the module), locally reinforced with 6 mm steel plate. The entire structure is hot-dip galvanised for high resistance to corrosion and outdoor use. Levelling feet for a stable and precise installation.

Rails: Sliding elements in Ø60 x 3 mm steel tube, hot-dip galvanised. Resistant, low-friction surface designed to withstand impacts, grinds and slides under intensive use.

Surface: Riding surface in 12 mm thick HPL (high-pressure laminate), a highly resistant material with good grip and low acoustic absorption. 3 mm metal transition plates at the entry areas give smooth access without raised edges. The surface fixing system minimises protruding elements to improve user safety.

Design: Modular: modules can easily be repositioned to suit the needs of each group of skaters.

Use: Any type of wheeled sport: skateboarding, rollerblading, BMX and scooter. Excellent grip; the surface does not heat up.

Spare parts: Available for 10 years

Inspection & Maintenance

- **Weekly inspection:** Visually check the general condition of the module, making sure there are no breakages, cracks, damaged edges, loose fixings or protruding elements. Check that the use area is free of obstacles.
- **Six-monthly inspection:** Check the structural stability of the module and the condition of the frames and levelling feet, and retighten all bolts and screws.
- **Annual inspection:** Check the condition of the metal parts, welds and galvanising, making sure there is no corrosion, deformation or damage.

If the equipment is subject to severe use, the maintenance plan must be increased. Do not use the product before installation or maintenance has been completed. Refer to the maintenance instructions. None of the materials require special treatment for disposal. Spare parts availability: 10 years. Morti Sport & Play offers inspection and maintenance for school and public sites.

Why Choose This Layout

- A proven, ready-designed layout that is quick to price and specify
- Every module certified to EN 14974, the European standard for skatepark facilities
- Hot-dip galvanised steel frames and 12 mm HPL riding surfaces for long outdoor life
- Modular: rearrange the modules or extend the park in phases as funding allows
- Designed, supplied and installed by Morti Sport & Play, with inspection and maintenance available

Images are computer visualisations or photographs of similar installations; the installed park will look similar. Colours may vary from those shown. The minimum recommended area is a guide; final layouts are confirmed at design stage. Data is subject to change without notice.
